Author Index to Volume 59

(L) indicates Letters to the Editor, (E) indicates Errata, (T) indicates Title only, (R) indicates Book Review. Book reviews are listed under the name of the author of the review, not the author of the book. Authors of books are indicated in the list under Book reviews in the Subject Index. There are no references to "see someone else" in the Author Index. Although it has meant a little duplication, all articles in which he was author or co-author have been included under each author. In the entry for each junior author, his name is followed by "with (senior author) and (other joint author)." Many titles have been shortened, to save space.

If the paper covered by a meeting abstract was published in the same year as the abstract, the two references have been separated by a solidus (/), i.e., 605A/723 indicates that the paper described in an abstract on page 605 has been published in full on page 723. Abstracts of papers presented only at meetings, for which complete papers have not been published, are not included in this Author Index. A *Key to Authors and Papers* at meetings was published on pages 519–522 and 1548–1550.

Adhav, R. S.
linear electro-optic effects—59, 414
Agarwal, G. S., with A. K. Jaiswal
two-photon detection—59, 1446
Allen, L., D. G. C. Jones, and D. G. Schofield
radiative lifetimes for Xe I and II—59, 842
Allen, William A., Gausman, Richardson, and Thomas
interaction of light with compact plant leaf—59, 1376
Altman, J. H.
Advanced Photography, Langford—59, 1506R
Ammann, E. O.
Generalized Networks, Fox, Ed.—59, 234R
Andersen, T., K. A. Jessen, and G. Sørensen
beam-foil excitation studies of aluminum—59, 1197
Anderson, D. W., with W. H. Payne
border-visibility study of Hermann grid—59, 229L
Anderson, W. L.
carrier suppression hologram microscopy—59, 224L/474A
Arakawa, E. T., with J. C. Sutherland and R. N. Hamm
optical constants of Na and K in vuv—59, 1581
Armstrong, Kendall R., with Bell, Nichols, and Bradley
generalized laws of refraction and reflection—59, 187/1008E
Asakura, Toshimitsu, Y. Kinoshita, and M. Suzuki
gaussian-beam fluctuation from random medium—59, 913
Avellén, Stig, and Lars Åke Svensson
fundamental unit of photometry—59, 1677L
Aviv, Y., with U. P. Oppenheim and A. Goldman
spectral emissivity of NO in the infrared—59, 734

Bååk, Tryggve
thermal coefficient of refractive index—59, 851
Babrov, Harold J., and Anthony R. Healy
strengths of 20 lines in γ_3 band of H_2O—59, 779L
Badoz, J. P., with J. C. Canit and M. Billardon
real and imaginary parts of refractive index—59, 1000L
Barakat, Richard
diffraction theory of aberration tests—59, 1432
Barbrow, L. E.
terminology in optics—59, 242L
Barlow, Horace B.
scaling and refractoriness in pulse trains—59, 1500L
Barr, E. Scott
John Dalton and ···Science, Cardwell, Ed.—59, 663R
Bartky, Charlotte E., with Burch, Gryvnak, and Patty
shapes of collision-broadened CO_2 lines—59, 267
Bashara, N. M.
Analysis of Thin Films, Murt, Guldner, Eds.—59, 1683R
Bashkin, S., W. S. Bickel, and B. Curnutte
beam-foil excitation in S II and S III—59, 879L
Beardsley, George F., Jr., and J. R. V. Zaneveld
apparent optical properties of sea water—59, 373
——, with J. R. V. Zaneveld
modulation tranfser function of sea water—59, 378
Beattie, W. H., and R. M. Tisinger
scattering for ellipsoids of revolution—59, 818
Bell, Robert J., Armstrong, Nichols, and Bradley
generalized laws of refraction and reflection—59, 187/1008E
Benedict, William S., with J. R. Izatt and H. Sakai
water-vapor lines from 475 to 692 cm^{-1}—59, 19
Bennett, H. E., D. K. Burge, R. L. Peck, and J. M. Bennett
ellipsometry, discontinuous, absorbing films—59, 499A/675
Bennett, J. M., with H. E. Bennett, Burge, and Peck
ellipsometry, discontinuous, absorbing films—59, 499A/675
Benton, Jeanne L., with John J. McCann
interaction of cones and rods to evoke color—59, 103
Beran, M. J., and T. L. Ho
propagation of fourth-order coherence—59, 492A/1134
Bergman, R. R., with G. R. Ochs and J. R. Snyder
laser-beam scintillation over horizontal paths—59, 231L
Bergström, I., with Bickel, Martinson *et al.*
mean lives of some excited levels of Li—59, 830
Bershad, Neil J.
resolution and optical-channel capacity—59, 157
Bickel, William S., Martinson, Lundin *et al.*
mean lives of some excited levels of Li—59, 830
——, with S. Bashkin and B. Curnutte
beam-foil excitation in S II and S III—59, 879L
Billardon, M., with J. C. Canit and J. P. Badoz
real and imaginary parts of refractive index—59, 1000L
Bitterli, C., with Mahan, Cannon, and Grant
ruby as macroscopic fluorescing material—59, 49
Blackmer, L. L.
Photoemissive Materials, Sommer—59, 1389R
Blair, D. J., and F. J. Munno
reaction emission spectrum for Na and Cl—59, 879L
Boston, Ray C.
angular-distribution coefficients—59, 1002L
Bottema, Murk
Fresnel zone-plate diffraction patterns—59, 1632
Bouman, Maarten A., with G. J. C. van der Horst
spatiotemporal chromaticity discrimination—59, 1482
Boynton, Robert M., with R. E. Lee and G. H. Cohen
latency variation in human pupil contraction—59, 97
——, with Robert T. Kintz
temporal summation in backward visual masking—59, 212
Bradley, Roger W., with Bell, Armstrong, and Nichols
generalized laws of refraction and reflection—59, 187/1008E
Bremermann, Hans J., with G. C. Sherman
generalized angular spectrum of plane waves—59, 146

Bridges, J. M., with Wiese, Kornblith, and Kelleher
transition probabilities for Ar I lines—**59**, 495A/1206
Brixner, Berlyn, with P. E. Rouse, Jr. and J. V. Kline
optimization, Czerny–Turner spectrograph—**59**, 513A/955
Bromander, J., with Bickel, Martinson, Lundin *et al.*
mean lives of some excited levels of Li—**59**, 830
Brown, Henry A.
effect of truncation on image enhancement—**59**, 228L
Brown, John Lott, J. W. Metz, and J. R. Yohman
test of scotopic suppression—**59**, 1677L
Bruner, Elmo C., Jr.
quantum efficiency of sodium salicylate—**59**, 204
Bryngdahl, Olof
reversed shearing interferometry—**59**, 142/499A
multiple-beam interferometry by holography—**59**, 1171
holography with evanescent waves—**59**, 1544A/1645
——, and Adolf W. Lohmann
holographic penetration—**59**, 474A/1245L
holographic compensation of motion blur—**59**, 497A/1175
Buchdahl, H. A.
iteration formulas for aberration coefficients—**59**, 1422
Buchta, R., with Bickel, Martinson, Lundin *et al.*
mean lives of some excited levels of Li—**59**, 830
Bufton, Jack L., with M. W. Fitzmaurice and P. O. Minott
wavelength dependence of beam scintillation—**59**, 7
——, with M. W. Fitzmaurice
measurement of log-amplitude variance—**59**, 462L
Bulkin, Bernard J.
depolarization in Raman spectra of powders—**59**, 1387L
Burch, Darrell E., Gryvnak, Patty, and Bartky
shapes of collision-broadened CO_2 lines—**59**, 267
Burge, D. K., with H. E. Bennett, Peck, and J. M. Bennett
ellipsometry, discontinuous, absorbing films—**59**, 499A/675
Burke, James E.
Advances in Microwaves 3, Young, Ed.—**59**, 465R
Burstein, E., with D. L. Portigal
internal conical refraction—**59**, 1567

Cahill, Patrick
lifetime of the $d^3\Pi_u$ state of H_2—**59**, 875L
Campbell, J. P., and L. G. DeShazer
near fields of truncated-gaussian apertures—**59**, 1427
Canit, J. C., M. Billardon, and J. P. Badoz
real and imaginary parts of refractive index—**59**, 1000L
Cannon, S. M., with Mahan, Bitterli, and Grant
ruby as macroscopic fluorescing material—**59**, 49
Carlson, D. G., with W. V. Smith
resonant, circularly scanning multiplexer—**59**, 108L
Carlson, Frederick P.
scintillation measurements and turbulence—**59**, 492A/1343
——, and Akira Ishimaru
spherical waves in locally homogeneous media—**59**, 319
Caruso, A. J., and Shardanand
helium continuum below 230 Å—**59**, 960
Cassen, Thomas, with N. Geacintov and G. Oster
polymeric matrices for organic phosphors—**59**, 367E
Chaghati, Mirza Said-uz-Zafar
energy levels of Zr, Nb, and Mo—**59**, 969
Chen, Kwan-Yu
Wolf–Rayet Stars, Gebbie, Thomas, Eds.—**59**, 1005R
Cheo, P. K., and J. Renau
scattering from rough metallic surfaces—**59**, 821
Chickering, K. D.
transformation of CIE primaries—**59**, 223L
perception of CIE tristimulus increments—**59**, 986
Childs, W. J., and L. S. Goodman
hyperfine structure of low levels of ^{159}Tb—**59**, 875L
Chilton, Frank, D. D. Jones, and W. K. Talley
imaging properties of light scattered by sea—**59**, 891
Chopra, K. N., with K. Singh
images of triangle by slit with defocusing—**59**, 1639
Clout, Peter N., and Douglas W. O. Heddle
elimination of polarization corrections—**59**, 715
Clúa, Alicia L., with D. Goorvitch and F. P. J. Valero
thorium lines between 2747 and 4572 Å—**59**, 971
Cohen, Gerald H., with R. E. Lee and R. M. Boynton
latency variation in human pupil contraction—**59**, 97
Collins, S. A., Jr., with J. P. Moreland
optical heterodyne detection—**59**, 10
——, with F. G. Gebhardt
laser-beam propagation in atmosphere—**59**, 1139
Coluccio, Thomas L., Shelton MacLeod, and J. J. Maier
target identification by photointerpreters—**59**, 1478
Condell, W. J.
Laser Parameter Measurements, Heard—**59**, 366R
Les Lasers, Orszag—**59**, 1388R
Condon, E. U., and H. Odabasi
self-consistent-field calculations—**59**, 659L
Connors, Mary M.
luminance for hue perception in small targets—**59**, 91
Cooke, Derry D., and Milton Kerker
scattering from cylinders at oblique incidence—**59**, 43
Costa, L. F., with F. Grum and J. L. Donovan
quantum yield for x-ray screens and phosphors—**59**, 848
Crosswhite, H. M., with R. L. Schwiesow
energy levels of Gd^{3+} in 5 hexagonal crystals—**59**, 592
energy levels of Gd^{3+} in LaF_3—**59**, 602
Curnutte, Basil, with S. Bashkin and W. S. Bickel
beam-foil excitation in S II and S III—**59**, 879L
——, with M. R. Querry and Dudley Williams
refractive index of water in the infrared—**59**, 1299

Dave, J. V.
Scattering on Polydispersions, Deirmendjian—**59**, 1249R
Davis, Thelma J.
···Infrared Group Frequencies, Bellamy—**59**, 117R
DeCou, Anthony B., with Nabil H. Farhat
wave structure functions looking up and down—**59**, 1489L
Deitz, Paul H., and Neal J. Wright
saturation of near-earth scintillation—**59**, 527
Deleuil, Roger, with Armand Wirgin
new type of blazed grating—**59**, 1348
Denis, A., J. Desesquelles and M. Dufay
beam-foil excitation of multiply ionized neon—**59**, 976
Desesquelles, J., with A. Denis and M. Dufay
beam-foil excitation of multiply ionized neon—**59**, 976
DeShazer, L. G., and M. M. Mann
suppression of absorption from excited levels—**59**, 460L
——, with J. P. Campbell
near fields of truncated-gaussian apertures—**59**, 1427
Desmarais, D., and Eric H. Pinnington
Zeeman effect in Gd II—**59**, 1391E
deWolf, David A.
strong irradiance fluctuations—**59**, 1455/1513A
Dhillon, H. S., with K. Singh
diffraction by annular aperture—**59**, 395
Dialetis, Demosthenes
relativistic correlation theory—**59**, 74/1008E
Diament, Paul, and M. C. Teich
radiation statistics and two-quantum spectra—**59**, 661L
Diamond, Fred I.
effects of diffused illumination in holography—**59**, 1339
Dohi, Toshihide, and Tatsuro Suzuki
interferometric spectroscopy using beats—**59**, 1248L

Donnadieu, A., with J. Richard
abnormal optical properties of thin Cu films—**59**, 662L
Donovan, J. L., with F. Grum and L. F. Costa
quantum yield for x-ray screens and phosphors—**59**, 848
Doughty, B. M., with R. H. Hughes
polarization produced by fast-proton impact—**59**, 659L
Dufay, M., with A. Denis and J. Desesquelles
beam-foil excitation of multiply ionized neon—**59**, 976

Ejder, E.
methods of representing spectra—**59**, 233L
Evans, Ralph M., and Bonnie K. Swenholt
chromatic strength of colors, III. surrounds—**59**, 628

Farhat, Nabil H., and Anthony B. DeCou
wave structure function looking up and down—**59**, 1489L
Farrell, Richard A., with Robert W. Hart
light scattering in the cornea—**59**, 766
Fay, Homer
electro-optic modulation of light in $LiNbO_3$—**59**, 1399
Feldman, Albert, and Deane Horowitz
reflective index of cuprous chloride—**59**, 1406
Feldman, Carl, with Joseph Reichman
optical properties of transition metals in ir—**59**, 1404
Finkman, E., with A. Goldman and U. P. Oppenheim
emissivity of 3.3-μ band of methane—**59**, 1218
Fitzmaurice, Michael W., J. L. Bufton, and P. O. Minott
wavelength dependence of beam scintillation—**59**, 7
——, and Jack L. Bufton
measurement of log-amplitude variance—**59**, 462L
Ford, N. C., Jr., with K. H. Langley
interferometric attenuation of scattering—**59**, 281
Fraenkel, Benjamin S., with Valero, Goorvitch, and Ragent
vuv spectra in laser-generated plasmas—**59**, 495A/1380L
Frankl, Daniel R., with Edward A. Ulmer, Jr.
infrared emission from free carriers in Ge—**59**, 1233
Fred, Mark, with Michael Wilson
energy-dependent Slater integrals—**59**, 827
French, P. W., with C. B. Greenberg
passive and dynamic absorption at 1.06 μ in glass—**59**, 1294
Frieden, B. Roy
maximum attainable MTF for lens systems—**59**, 402
Fry, Glenn A.
visibility of sine-wave gratings—**59**, 610

Gaily, T. Dean
absorption of molecular oxygen near 1215 Å—**59**, 536
Gampel. L., and F. M. Johnson
refractive index of single-crystal Se—**59**, 72
Garstang, R. H.
Principles of Atomic Spectra, Shore, Menzel—**59**, 116R
Gaskill, Jack D.
atmospheric degradation of holographic images—**59**, 308
Gausman, Harold W., with Allen, Richardson, and Thomas
interaction of light with compact plant leaf—**59**, 1376
Geacintov, Nicholas, G. Oster, and T. Cassen
polymeric matrices for organic phosphors—**59**, 367E
Gebhardt, F. G., and S. A. Collins, Jr.
laser-beam propagation in atmosphere—**59**, 1139
Gieszelmann, E. L., S. F. Jacobs, and H. E. Morrow
quartz quarter-wave plate for 3.39 μm—**59**, 500A/1381L
Giles, John W., Jr.
reconstruction, Fraunhofer x-ray hologram—**59**, 498A/1179
construction of x-ray hologram with microprobe—**59**, 778L
Gilmore, H. F.
growth of small photographic images—**59**, 1685E
Givens, M. P., with James C. Wyant
effects of γ on hologram reconstruction—**59**, 482A/1650

Gloge, D., and D. Marcuse
informal quantum theory of light rays—**59**, 1629
Goldman, A., E. Finkman, and U. P. Oppenheim
emissivity of 3.3-μ band of methane—**59**, 1218
——, with U. P. Oppenheim and Y. Aviv
spectral emissivity of NO in infrared—**59**, 734
Goldsmith, S.
new multiplets in vuv spectra of Co ions—**59**, 1678L
Goodman, J. W.
Systems and Transforms in Optics, Papoulis—**59**, 882R
Goodman, L. S., with W. J. Childs
hyperfine structure of low levels of ^{159}Tb—**59**, 875L
Goorvitch, David, F. P. J. Valero, and A. L. Clúa
thorium lines between 2747 and 4572 Å—**59**, 971
——, with F. P. J. Valero, Fraenkel, and Ragent
vuv spectra in laser-generated plasmas—**59**, 495A/1380L
Gordon, Jacqueline I.
model for a clear atmosphere—**59**, 14
Graham, C., and R. E. Raab
pulsed-field measurement of Faraday effect—**59**, 195
Graham, Clarence H., and Yun Hsia
saturation and the foveal achromatic interval—**59**, 993
Grant, D. G., with Mahan, Bitterli, and Cannon
ruby as macroscopic fluorescing material—**59**, 49
Graves, R. H. W.
optical constants of anisotropic crystals—**59**, 1225
Green, Louis C.
Annual Rev···Astronomy 6, Goldberg, Ed.—**59**, 1250R
Greenberg, C. B., and P. W. French
passive and dynamic absorption at 1.06 μ in glass—**59**, 1294
Griffin, P. M., and J. W. Hutcherson
oscillator strengths of Kr and Xe resonance lines—**59**, 1607
Grum, Franc
···Absorption Spectrophotometry, Stearns—**59**, 1006R
Reflexionsspektroskopie, Kortüm—**59**, 1503R
——, L. F. Costa and J. L. Donovan
quantum yield for x-ray screens and phosphors—**59**, 848
Gryvnak, David A., with Burch, Patty, and Bartky
shapes of collision-broadened CO_2 lines—**59**, 267

Haines, K. A., with B. P. Hildebrand
holography by scanning—**59**, 1
Hamm, R. N., with J. C. Sutherland and E. T. Arakawa
optical constants of Na and K in vuv—**59**, 1581
Haner, A. B., with N. R. Isenor
modulation from pair of pseudothermal sources—**59**, 1290
Hansen, J. E.
line strengths in B I isoelectronic sequence—**59**, 722
Happ, Glenn P.
Mass Spectrometry···, White—**59**, 466R
Introduction to Mass Spectrometry, Roboz—**59**, 1006R
Hardy, Arthur C.
lens equation for telescopes—**59**, 1386L
Hargrove, L. E.
reduction of mode-locked-laser pulse duration—**59**, 1680L
Hariharan, P.
partial coherence and localization of fringes—**59**, 1384L
Harris, Franklin S., Jr., Tavenner, and Mitchell
single-slit Fresnel diffraction patterns—**59**, 293
Harris, S. E., and R. W. Wallace
acousto-optic tunable filter—**59**, 744
Hart, Robert W., and Richard A. Farrell
light scattering in the cornea—**59**, 766
Healy, Anthony R., with Harold J. Babrov
strengths of 20 lines in γ_3 band of H_2O—**59**, 779L
——, with Burton Krakow
strengths of water lines, 1617–1429 cm^{-1}—**59**, 1490L
Heddle, Douglas W. O., with Peter N. Clout
elimination of polarization corrections—**59**, 715

Hafferlin, Ray
Plasma Spectroscopy, Marr—**59,** 883R
Held, Richard
Nature of Perceptual Adaptation, Rock—**59,** 365R
Helstrom, Carl W.
detection by background-limited system—**59,** 164
detection of objects through turbulent medium—**59,** 331
detection by quantum-limited optical system—**59,** 924
Henderson, B. J., with Harvey N. Rexroad
maximum power transfer, confocal apertures—**59,** 1415
Hesser, James E., with Terry A. Matilsky
radiative lifetimes of uv transitions of Ar II—**59,** 579
Hickling, Robert
holography of liquid droplets—**59,** 473A/1334
Hildebrand, B. P., and K. A. Haines
holography by scanning—**59,** 1
Hills, Robert A., Jr.
Applied Optics, 1, Levi—**59,** 1683R
Hioki, Ryuichi, with Masako Sato
modification of (U^*, V^*, W^*) system—**59,** 349
Hisdal, Ellen
information content of photon beams—**59,** 921
Ho, T. L.
fluctuations of laser beam in atmosphere—**59,** 385
——, with M. J. Beran
propagation of fourth-order coherence—**59,** 492A/1134
Holladay, T. M., and P. G. Roetling
defocus correction by coherent optical system—**59,** 460L
Holloway, W. W., Jr., and M. Kestigian
optical properties of Ce-activated garnet—**59,** 60
Hoover, Gary M., and Dudley Williams
ir absorptance of CO at low temperatures—**59,** 28
Horner, Joseph L.
least mean-square-error optical filter—**59,** 553/1008E
Horowitz, Deane, with Albert Feldman
refractive index of cuprous chloride—**59,** 1406
Howard, John N.
Practical Scientific Russian, Kaganoff—**59,** 234R
Hsia, Yun, with C. H. Graham
saturation and the foveal achromatic interval—**59,** 993
Huggins, Maurice L.
Crystal Structures, 2nd ed., Vol. 4, Wyckoff—**59,** 364R
Hughes, R. H., and B. M. Doughty
polarization produced by fast-proton impact—**59,** 659L
Hughey, L. R., with B. J. Waclawski
photoelectron yield of heated tungsten—**59,** 1494L
Humphreys, Curtis J., with Victor Kaufman
energy levels and wavelengths of ^{86}Kr I—**59,** 487A/1614
Hunter, Richard S., and Walter Schramm
blue tristimulus filter—**59,** 881L
Hutcherson, J. W., with P. M. Griffin
oscillator strengths of Kr and Xe resonance lines— **59,** 1607
Hyams, Lyon, with Aran Safir
explanation of Stiles–Crawford effect—**59,** 757

Ikeda, Mitsuo, with Mitsuo Urakubo
rod–cone interrelation—**59,** 217
Imai, Masaaki, Kikuchi, Matsumoto, and Kinoshita
mode conversion in lens-like gas—**59,** 904
Isenor, N. R., and A. B. Haner
modulation from pair of pseudothermal sources—**59,** 1290
Ishimaru, Akira, with Frederick P. Carlson
spherical waves in locally homogeneous media—**59,** 319
Isler, R. C.
time-constant effects on level-crossing values—**59,** 727
Ivey, Henry F.
Champ Cristallin et Luminescence, Curie—**59,** 1500R
Izatt, Jerald R., H. Sakai, and W. S. Benedict
water-vapor lines from 475 to 692 cm^{-1}—**59,** 19

Jacobs, S. F., with Gieszelmann and Morrow
quartz quarter-wave plate for 3.39 μm—**59,** 500A/1381L
Jaiswal, A. K. and G. S. Agarwal
two-photon detection—**59,** 1446
James, Thomas C.
collision narrowing in molecular hydrogen—**59,** 1602
Jeppesen, Myron A.
Optical Physics, Lipson, Lipson—**59,** 1540R
Jensen, K. A., with T. Andersen and G. Sørensen
beam-foil excitation studies of aluminum—**59,** 1197
Johnson, F. M. with L. Gampel
refractive index of single-crystal Se—**59,** 72
Johnston, T. F., Jr. and G. J. Wolga
measurement of Ne fine-structure splitting—**59,** 190
Jones, D. G. C., with L. Allen and D. G. Schofield
radiative lifetimes for Xe I and II—**59,** 842
Jones, Dixon D., with F. Chilton and W. K. Talley
imaging properties of light scattered by sea—**59,** 891
Jones, J. E.
absorption at surface opposite incidence—**59,** 877L
Judd, Deane B.
terminology in optics—**59,** 122L

Karplus, M., with P. W. Langhoff
Padé summation of Cauchy dispersion equation—**59,** 863
Kaspar, Frank G.
object power spectrum by holography—**59,** 359L
Holography···Review, Kallard, Ed.—**59,** 1006R
Kasuya, M., with G. T. Yonemura
color discrimination for small substense—**59,** 131
Kato, Makoto, and Tatsuro Suzuki
holograms formed by zone-plate interferometer—**59,** 303
Kaufman, Victor, and Leon J. Radziemski, Jr.
levels, interactions, S I and Cl II—**59,** 227/885E
——, and Curtis J. Humphreys
energy levels and wavelengths of ^{86}Kr I—**59,** 487A/1614
——, with Leon J. Radziemski, Jr.
wavelengths, energy levels, and analysis of Cl I—**59,** 424
Kavathekar, A. K., with K. Singh
bar pattern through annular aperture—**59,** 936
Keesey, Ulker Tulunay
visibility of flickered stabilized target—**59,** 604
Kelleher, D. E., with Wiese, Bridges, and Kornblith
transition probabilities for Ar I lines—**59,** 495A/1206
Keller, Joseph B.
validity of Born and Rytov approximations—**59,** 1003L
Kelly, Donald H.
flickering patterns and lateral inhibition—**59,** 1361
diffusion model of linear flicker responses—**59,** 1665
Kemp, James C.
piezo-optical birefringence modulators—**59,** 950

amplitude diffraction-grating imaging—59, 568
Valero, Francisco P. J., Goorvitch, Fraenkel, and Ragent
vuv spectra in laser-generated plasmas—59, 495A/1380L
——, with Goorvitch and Clúa
thorium lines between 2747 and 4572 Å—59, 971
van der Horst, Gerard J. C.
chromatic flicker—59, 1213
Fourier analysis and color discrimination—59, 1670
——, and Maarten A. Bouman
spatiotemporal chromaticity discrimination—59, 1482
Vander Sluis, K. L., and J. R. McNally, Jr.
recent Zeeman results in erbium I—59, 1202
Vedam, K., W. Knausenberger, and F. Lukes
ellipsometric determination of film on absorber—59, 64
Vernier, P. J.
linearity between density and exposure—59, 444

Waclawski, B. J., and L. R. Hughey
photoelectron yield of heated tungsten in vuv—59, 1494L
Wallace, R. W., with S. E. Harris
acousto-optic tunable filter—59, 744
Walsh, Thomas E.
ir absorptance of ammonia, 20–35 μ—59, 261
Walther, Adriaan
lenses, wave optics, and eikonal functions—59, 488A/1325
Webster, John G.
critical duration for pupillary light reflex—59, 1473
Weinstein, F. S.
error in photographic radiometric measurements—59, 108L
Weiss, Armin K.
*Elektronische Vorgänge in Gasen···*Schulz—59, 1501R
Weitzman, Donald O., and Jo Ann S. Kinney
effect of size, duration, location on color—59, 640/1250E
——, with J. A. S. Kinney and S. M. Luria
visibility of colors under water—59, 624

XUM

Wells, Willard H.
loss of resolution in H_2O from scattering—**59**, 686
Westheimer, Gerald
On Binocular Rivalry, Levelt—**59**, 236R
White, K. O., with O. Theimer
hole theory of light scattering by liquids—**59**, 181
Wiese, W. L., Bridges, Kornblith, and Kelleher
transition probabilities for Ar I lines—**59**, 495A/1206
Wilder, Donald R.
OMNITAB: Program, Hilsenrath *et al.*—**59**, 665R
Williams, Charles S.
specularly vs diffusely reflecting energy—**59**, 249
Williams, Dudley
Molecular Spectroscopy, Hepple, Ed.—**59**, 1250R
——, with Gary M. Hoover
ir absorptance of CO at low temperature—**59**, 28
——, with M. R. Querry and B. Curnutte
refractive index of H_2O in ir—**59**, 1299
Williams, W. J., with Murcray, Kyle, and Murcray
presence of HNO_3 in upper atmosphere—**59**, 483A/1131
Wilson, Michael, and Mark Fred
energy-dependent Slater intergrals—**59**, 827
Wirgin, Armand, and Roger Deleuil
new type of blazed grating—**59**, 1348
Wolf, Emil, with E. W. Marchand
diffraction at small apertures in black screens—**59**, 79
Wolfe, William L.
Infrared System Engineering, Hudson—**59**, 1389R
Wolga, G. J., with T. F. Johnston, Jr.
measurement of neon fine-structure splitting—**59**, 190
Wray, J. H., and John T. Neu
refractive index as function of temperature—**59**, 774
Wright, Neal J., with Paul H. Deitz
saturation of near-earth scintillation—**59**, 527
Wyant, James C., and M. P. Givens
effects of γ on hologram reconstruction—**59**, 482A/1650
Wynne, Charles G.
two-mirror anastigmats—**59**, 572
Wyszecki, Günter
Optical Resource Letter on colorimetry—**59**, 123

Yariv, Amnon, with Pearson, McGill, and Kurtin
diffraction by semi-infinite plane—**59**, 1440
Yohman, Joseph R., with J. L. Brown and J. W. Metz
test of scotopic suppression—**59**, 1677L
Yonemura, G. T., and M. Kasuya
color discrimination for small subtense—**59**, 131
Yu, F. T. S.
Markov photographic noise—**59**, 342
five-point analysis of nonlinear holograms—**59**, 360L
Yura, H. T.
optical propagation through turbulent medium—**59**, 111L
——, with R. F. Lutomirski
MTF and phase structure in turbulent medium—**59**, 999L
aperture averaging of fluctuating light—**59**, 1247L

Zaneveld, J. Ronald V., and George F. Beardsley, Jr.
modulation transfer function of sea water—**59**, 378
——, with George F. Beardsley, Jr.
apparent optical properties of sea water—**59**, 373
Zdrojkowski, R. J., and R. L. Longini
optical transmission through whole blood—**59**, 898
Zweig, Gilbert
optical properties of reflex copying films—**59**, 1659

Subject Index to Volume 59

(1) Subjects, not titles, have been indexed. In the great majority of cases, the subjects under which each paper is indexed were chosen by the author.
(2) Contents of papers (and abstracts of papers presented at meetings) have been indexed by principal subjects rather than by a word breakdown of the title.
(3) Subheadings were in most cases written by the author. They are arranged by page number (i.e., chronologically) under each heading except Book Reviews, Necrology, and Personalia, which are arranged alphabetically.

Aberrations

twin-image elimination in holography—59, 358L

devices

afocal 0.4–5 μ Schmidt–Cassegrain system—59, 357L
astigmatism and image processing—59, 485A
variable null lens—59, 485A
asymmetric Czerny–Turner spectrograph—59, 513A/955
optimizing Czerny–Turner spectrographs—59, 513A/1189
two-mirror anastigmats—59, 572
Conic Mirrors, Brueggemann—59, 664R
image formation in x-ray telescopes—59, 1518A
tilted-component telescopes—59, 1521A

image formation

scanned-source holography—59, 1
automatic lens-design program—59, 477A
image processing for information extraction—59, 497A
image formation with annular aperture—59, 936
imaging using correlation interferometry—59, 1525A
growth of small photographic images—59, 1685E

lens design

aberration-balancing merit function—59, 1155/1512A
design of corrected Ritchey–Chrétien telescope—59, 477A
root-locus characterization of optics—59, 478A
new glass chart, chromatic correction—59, 478A
first- and third-order lens-system design—59, 478A
concentric telescopic meniscus under water—59, 484A
Geometrical Optics, Fry—59, 1505R

theory

zero third-order spherical aberration—59, 288
maximum attainable MTF—59, 402
modulation, variance of wave aberration—59, 477A/692
simplified iteration for high orders—59, 1422
diffraction theory of aberration tests—59, 1432
images of triangle by slit with defocusing—59, 1639

Absorption

atmospheric

atmospheric absorption due to HNO_3—59, 483A/1131
H_2O vapor, infrared line strengths—59, 779L, 1490L
optical constants of anisotropic crystals—59, 1225

materials

ir absorptance of CO at low temperatures—59, 28
ruby as a macroscopic fluorescing material—59, 49
cerium doped in YAG and other garnet crystals—59, 60
optical constants of film, by ellipsometry—59, 64
regeneration of sensitizing molecules—59, 112L
dispersion of He in visible and near infrared—59, 199
cylindrical dielectric media—59, 492A
optical constants of Ag_2S tarnish films—59, 499A
Ag tarnishing measured by ellipsometry—59, 499A/675
loss mechanisms in clad glass fibers—59, 500A
saturation of transmission—59, 505A
optical constants of some pump oils in vuv—59, 514A
coefficient of molecular oxygen near 1215 Å—59, 536
$CaF_2:Sm^{2+}$ (type I) crystals—59, 588
energy levels of Gd^{3+} in 5 hexagonal crystals—59, 592
energy levels of Gd^{3+} in LaF_3—59, 602
visibility of colors in different waters—59, 624
···*Semiconductors*, Greenaway and Harbeke—59, 666R
ir, NO fundamental at high temperature—59, 734
optical-constants change in Ge—59, 857
direct solution of reflectance equations—59, 876L
at surface opposite incidence—59, 877L
nonhemolyzed blood, 632.8 nm—59, 898
···*Absorption Spectrophotometry*, Stearns—59, 1006R
infrared emission from free carriers in Ge—59, 1233
passive and dynanic at 1.06 μ in glass—59, 1294
refractive index of water in infrared—59, 1299
optical properties of Sb and Bi in far uv—59, 1305
corn leaf—59, 1376
thin-film ellipsometric calculations—59, 1385L
overlapping I_2 vibrational-rotational lines—59, 1515A
micrometeoroid effects on optical properties—59, 1518A
of photosensitive films in reflex copying—59, 1659
Analysis of Thin Films, Murt, Guldner, Eds.—59, 1683R

spectra

water-vapor lines from 475 to 692 cm^{-1}—59, 19
ammonia, 20–35 μ—59, 261
by CO_2, shapes of collision-broadened lines—59, 267
analysis of resonance profiles—59, 494A
lines from laser-generated plasmas—59, 495A/1380L
laser-excited resonance fluorescence—59, 496A
absorption spectrum of nitrogen dioxide—59, 496A
ir absorption spectrum of HS near 4 μ—59, 496A
strengths of lines in H_2O vapor—59, 779L, 1490L
Conference on Spectroscopy, Narasimham, Ed.—59, 784R
emissivity of 3.3-μ band of methane—59, 1218
measuring atomic-state populations—59, 1262
integrating-sphere spectroscopy—59, 1537A
inductively heated King-type furnace—59, 1547A
vacuum uv, of Na and K—59, 1581
foreign-gas broadening of HF by CO_2—59, 1598

theory

generalized laws of refraction, reflection—59, 187/1008E
suppression from excited levels—59, 460L
irradiance in locally spherical fields—59, 476A
MTF of absorbing, nonscattering layer—59, 501A/1322
analysis of electron-scattering data—59, 738

Aluminum

Rayleigh- and Raman-scattering cross sections—59, 34
vuv spectra in laser-generated plasmas—59, 495A/1380L

infrared reflectance of metallic elements—59, 499A
line strengths in B I isoelectronic sequence—59, 722
beam-foil excitation studies of aluminum—59, 1197
lattice spectra of rare-earth garnets—59, 1240
reflectance, Al overcoated with MgF_2 or LiF—59, 1523A

Antimony

optical properties of Sb and Bi in far uv—59, 1305

Argon

transition probabilities for Ar I lines— 59, 495A/1206
polarization produced by fast-proton impact—59, 659L
spectra, transition probabilities in Ar II—59, 980
refractive indices of liquids and solid gases—59, 998L
transition probabilities of np^4 $(n+1)$ p states—59, 1281
absorption spectrum of Ar in vuv—59, 1525A

Astronomy

Infrared Astronomy, Brancazio, Cameron, Eds.—59, 364R
chopper-modulated infrared detecting system—59, 391
7883-Å CO_2 band in spectrum of Venus—59, 496A
dim-light photography—59, 502A
extreme-ultraviolet spectroheliometer—59, 514A
Wolf-Rayet Stars, Gebbie, Thomas, Eds.—59, 1005R
Annual Rev···Astronomy 6, Goldberg, Ed.—59, 1250R
multispectral imaging of Mars from a lander—59, 1519A
curve of growth of hydrogen quadrupole lines—59, 1602

Atmospheric optics

model for a clear atmosphere, no absorption—59, 14
meteorological geosynchronous satellites—59, 1516A
Technical Group report—59, 469
earth-to-space contrast transmittance—59, 475A
observation of aerospacecraft—59, 475A
interferometry of temperature inversions—59, 483A
polarization by the Earths' atmosphere—59, 1517A
improved polarimeter for atmospheric studies—59, 1517A
ultraviolet radiance of the horizon sky—59, 1518A
radiometric calibration of airglow photometer—59, 1518A

attenuation

optimum heterodyne detection, degraded beam—59, 10
optical propagation through turbulent medium—59, 111L
twinkling range of turbulence layers—59, 113L
laser-beam scintillation over horizontal paths—59, 231L
propagation through random media—59, 381
fluctuations of laser beam in atmosphere—59, 385
irradiance in locally spherical fields—59, 476A
statistics of sea radiance—59, 477A
guassian-beam fluctuation in random medium—59, 913
validity of Born and Rytov approximations—59, 1003L
laser-beam propagation, log-amplitude mean—59, 1139
aperture averaging of fluctuating light—59, 1247L
foreign-gas broadening of HF by CO_2—59, 1598

image transmission

scintillation, wavelength dependence—59, 7
laser-scintillation saturation in turbulence—59, 226L
atmospheric degradation of holographic images—59, 308
detection through turbulent medium—59, 331
technique for measuring mutual coherence—59, 475A
contrast transmission for tropical atmospheres—59, 484A
laser beam in strong turbulence—59, 490A
laser-beam broadening in atmosphere—59, 490A
coherent propagation through atmosphere—59, 491A
spectra of beam in turbulent atmosphere—59, 491A
saturation of scintillation—59, 491A
diagnosis of atmospheric turbulence—59, 492A/1343
propagation of fourth-order coherence—59, 492A/1134
approaching perfect imagery—59, 497A
coherent optical propagation—59, 527
MTF and phase structure in turbulent medium—59, 999L
wave structure function looking up and down—59, 1489L
restoration of turbulence-degraded images—59, 1524A

scattering

effect of atmospheric inhomogeneities—59, 115L
spherical waves in random media—59, 319
polarization from haze and clouds—59, 484A
infrared cloud radiance—59, 484A
scattering by dielectric turbulence—59, 491A
absolute calibration of laser system—59, 517A
strong irradiance fluctuations—59, 1455/1513A
saturation of propagation in atmosphere—59, 1513A
laser-propagation experiments—59, 1513A
balloon atmospheric-propagation experiment—59, 1513A
phase fluctuations, interferometry—59, 1513A
wavelength dependence in stellar scintillation—59, 1513A

spectral absorption

wavelength dependence, 0.633 μ, 10.6 μ—59, 462L
atmospheric absorption due to HNO_3—59, 483A/1131

spectral energy distribution

ir emission of atmosphere and aurorae—59, 483A
night-sky radiance from 400 to 2000 nm—59, 483A
spectral emissivity of NO in the infrared—59, 734

Berkelium

nuclear magnetic moments of ^{249}Bk and ^{253}Es—59, 1526A

Beryllium

vuv spectra in laser-generated plasmas—59, 495A/1380L

Birefringence

electro-optically induced in KDP-type crystals—59, 414
acousto-optic diffraction—59, 744
electro-optic, near optic axis in $LiNO_3$—59, 1399
linear electro-optic (Pockels) effect—59, 1573
realization of new type of birefringent filter—59, 1522A
simple quartz quarter-wave plate—59, 500A/1381L
stress-modulated wave plate—59, 950
automatic photoelastimeter—59, 1542A

measurements

reflection circular dichroism—59, 500A
photoelastic constants of α quartz—59, 682
holographic interferometry, single exposures—59, 1540A

theory

use of Mueller matrices for calculations—59, 1004L
piezo-rotatory coefficients, crystal symmetry—59, 1229
refraction in stratified anisotropic media—59, 1527A
internal conical refraction—59, 1567

Bismuth

hyperfine structure in arc spectrum of Bi—59, 487A
^{209}Bi-^{209}Bi isotope shift and hyperfine structure—59, 836
optical properties of Sb and Bi in far uv—59, 1305

Cadmium

Stark effect—59, 782L
theory for $4d^9 5s5p$ in iron—59, 1226
deep-blue, uv He–Cd glow-discharge lasers—59, 1510A

Calcium

isotope shift measurements in Ca—59, 488A

Carbon

monoxide, ir absorptance at low temperatures—59, 28
collecting systems for beam-foil spectroscopy—59, 496A
line strengths in B I isoelectronic sequence—59, 722
radiative lifetimes—59, 780L

Cerium

in garnet crystals, fluorescence and absorption—59, 60

Cesium

Rayleigh light-scattering cross sections—59, 34

Chlorine

singly ionized, energy levels, parameters—59, 227/885E
wavelengths, energy levels, and analysis of Cl I—59, 424
sodium flame spectroscopy, 2000–6500 Å—59, 879L

Cobalt

analysis of complex atomic spectra—59, 486A
new multiplets of Co IX to Co XII in vuv—59, 1678L

Coherence

linearity between density and exposure—59, 444
technique for measuring mutual coherence—59, 475A
fingerprints, coherent optical techniques—59, 489A
power spectra of coherent optical processor—59, 489A
coherent propagation through atmosphere—59, 491A
measurement of complex amplitude—59, 497A
effect of coherence on photographs—59, 502A
high-coherence, high-power laser at 1.0621 μ—59, 505A
Technical Group report—59, 788, 1011
modulation from pair of pseudothermal sources—59, 1290
partial coherence and localization of fringes—59, 1384L
speckle removal and optical slicing—59, 1545A

holography

zone plates, Fourier transforms, holograms—59, 303
recognition through a turbulent medium—59, 474A
holographic subtraction—59, 498A
practical holography—59, 1539A
pulsed-laser holography applications—59, 1540A

quantum aspects

fourth-order correlation function—59, 661L
in detection under quantum limitation—59, 924
two-photon photoelectric detection—59, 1446

theory

atmospheric distortion, heterodyne detection—59, 10
in presence of random sources—59, 74/1008E

Generalized Networks, J. Fox, Ed.—59, 234R
Stokes-algebra formalism—59, 297
detection of objects through turbulent medium—59, 331
mutual power spectrum for random media—59, 381
diffraction by annular aperture—59, 395
maximum MTF in incoherent radiation—59, 402
defocus correction by coherent optical system—59, 460L
partially coherent optical systems—59, 488A/1149
linear vector operations in optical processing—59, 489A
mixing of partially coherent beams—59, 491A
propagation of fourth-order coherence—59, 492A/1134
high-gain ir gas laser—59, 504A
defocused, coherently illuminated edge—59, 711
degrees of freedom of an image—59, 799
Systems and Transforms in Optics, Papoulis—59, 882R
image of incoherent periodic bar pattern—59, 936
lens response to extended sources—59, 1525A
coherent light propagation in optical systems—59, 1527A
excitation by ultrashort crossed optical pulses—59, 1532A

Color

Dict. of Visual Science, Shapero *et al.,* Eds.—59, 235R
Technical Group report—59, 238
image formation, photoelectrophoresis—59, 328
color image retrieval from transparencies—59, 501A
maximum luminous efficiency contours—59, 1011

measurement

modification of the (U^*, V^*, W^*) system—59, 349
color difference and CIE 1960 UCS diagram—59, 503A
cube-root coordinates color-difference meter—59, 503A
multispectral imaging of Mars from a lander—59, 1519A
interference filters for color measurement—59, 1532A
photomechanical digital-output device—59, 1547A

perception

luminance requirements for identification—59, 91
equivalent luminances of colors—59, 125
discrimination, small angle and low luminance—59, 131
large-field color matching and adaptation—59, 463LE
perception of chromaticness differences—59, 503A
pressure blindness and interocular hue shifts—59, 503A
prediction of perceived color—59, 503A
orientation-specific color after effects—59, 504A
critical duration of red and green receptors—59, 504A
visibility of colors in different waters—59, 624
chromatic strength of colors, III. surrounds—59, 628
wavelength-difference functions—59, 635
prediction in two-primary projections—59, 644
perception of CIE tristimulus increments—59, 986

Color vision

large-field color matching and adaptation—59, 463LE
pressure blindness and interocular hue shifts—59, 503A
orientation-specific color after effects—59, 504A
John Dalton and···Science, Cardwell, Ed.—59, 663R
blue tristimulus filter—59, 881L
near threshold luminance additivity—59, 1533A
congenital tritan defects and nerve atrophy—59, 1533A
deuteranopic convergence point—59, 1533A

adaptation

luminance requirements in small targets—59, 91
prediction of perceived color—59, 503A
critical duration of red and green receptors—59, 504A
chromatic strength of colors, III. surrounds—59, 628
perceived color, two-primary projections—59, 644
color change induced by background color—59, 1370
highly saturated-color stimuli—59, 1532A

discrimination

small-angle and low-luminance tritanopia—59, 131
perception of chromaticness differences—59, 503A
color difference and CIE 1960 UCS diagram—59, 503A
tritanopic effect in color normals—59, 640/1250E
perception of CIE tristimulus increments—59, 986
saturation and the foveal achromatic interval—59, 993
chromaticity discrimination—59, 1213, 1482, 1670
color-match classifications—59, 1533A
chromatic border contrast—59, 1533A

physiology

color sensations from rods and long-wave cones—59, 103
spectral sensitivity of *rhesus* monkey—59, 503A
wavelength effects and saccadic suppression—59, 617

Colorimetry

optical resource letter—59, 123
equivalent luminances of colors—59, 125
transformation of CIE primaries—59, 223L
modification of the (U^*, V^*, W^*) system—59, 349
large-field color matching and adaptation—59, 463LE
silicon solar cell as photometric detector—59, 480A
optics and the lunar landing—59, 481A
cube-root coordinates color-difference meter—59, 503A
interference filters for adjustment of systems—59, 508A
design of glass filter combinations—59, 518A
Helson–Judd equations, two-primary projection—59, 644
blue tristimulus filter—59, 881L
perception of CIE tristimulus increments—59, 986
···Absorption Spectrophotometry, Stearns—59, 1006R
Applied Optics 1, Levi—59, 1683R

Computers

automatic lens-design program—59, 477A
automatic zoom-lens design—59, 478A
calculationof large atomic-energy-level arrays—59, 486A
measurement of complex amplitude—59, 497A
the kinoform: a wave-shaping device—59, 497A
image processing for information extraction—59, 497A
synthesis of holograms using hybrid computer—59, 498A
continuous-drive Fourier spectroscopy—59, 507A
OMNITAB···Program, Hilsenrath *et al.*—59, 665R
Analysis of Ellipsometer Meas., McCrackin—59, 1250R
properties of defocused optical system—59, 1314
lens design using small computers—59, 1511A
optimization and image-evaluation program—59, 1520A
experiments with digital-image processor —59, 1525A

Copper

infrared reflectance of metallic elements—59, 499A
abnormal optical properties of thin Cu films—59, 622L
hfs and g_J values of $3d^9 4s4p$ configuration—59, 962
theory for $3d^9 4s4p$—59, 1266

Crystals

optical properties of cerium-activated garnet—59, 60
silicon, optical constants—59, 64
refractive index of single-crystal Se—59, 72
Crystal Structures, 2nd ed., Vol. 4, Wyckoff—59, 364R
ADP, KDP, ADA, KDA, RbDP, and CsDA—59, 414
holography of crystal growth from melt—59, 474A
phase-locked operation of Nd:YAG lasers—59, 506A
CaF_2: Sm^{2+} (type I), energy levels—59, 588

Crystals (Continued)
energy levels of Gd^{3+}—59, 592, 602
optical constants of anisotropic crystals—59, 1225
pressure variation of optical activity—59, 1229
lattice spectra of rare-earth garnets—59, 1240
ir transmittance of rhombic sulfur—59, 1491L
Champ Cristallin et Luminescence, Curie—59, 1500R
optically induced refractive-index changes—59, 1530A
internal conical refraction—59, 1567

optically active
photoelastic constants of α quartz—59, 682
Excitons in Molecular Crystals, Zahlan, Ed.—59, 883R
light modulation near optic axis in $LiNbO_3$—59, 1399
$(CH_2)_6N_4$, light modulation, electro-optics—59, 1574

Detection
of incoherent objects—59, 164
through turbulent medium—59, 331
technique for measuring mutual coherence—59, 475A

infrared
chopper-modulated infrared detection system—59, 391
detection with fiber-laser preamplifier—59, 506A
germanium bolometer in far-infrared region—59, 1547A

optical system
optimum optical heterodyne detection—59, 10
mixing of partially coherent beams—59, 491A
approaching perfect imagery—59, 497A
scanned-laser infrared microscope—59, 518A
two-quantum photocurrent spectra—59, 661L
time-constant effects on level-crossing values—59, 727

quantum efficiency
two-photon photoelectric detection—59, 1446
absolute calibration of laser system—59, 517A
information content of photon beams—59, 921

visual
scotopic thresholds automated—59, 464L
observation of aerospacecraft—59, 475A
by quantum-limited system—59, 924
target identification by photointerpreter—59, 1478

Detectors
magnitudes of bright stars—59, 479A
HgCdTe detectors for ir laser receivers—59, 479A
silicon solar cell as photometric detector—59, 480A
spatial filters for sampling detectors—59, 1516A

infrared
thermal detectivity of infrared detectors—59, 480A
criterion of efficiency of scanning systems—59, 1541A
germanium bolometer in far-infrared region—59, 1547A

photoelectric
low-light-level lenses—59, 478A
origin of dark current in photomultipliers—59, 480A
limiting resloution of imaging sensors—59, 539
photodetector spectral-response console—59, 480A
Photoemissive Materials, Sommer—59, 1389R
tunnel-diode photoresponse—59, 1515A
multispectral imaging of Mars from a lander—59, 1519A
analysis of scanned, active imaging system—59, 1519A

photographic
granularity factor for multilevel grains—59, 455
dim-light photography—59, 502A

ultraviolet
absorption spectrum of nitrogen dioxide—59, 496A

Dielectric layers
antireflective, for laser materials—59, 468E
abnormal optical properties of thin Cu films—59, 662L
photoelectron emission from tungsten in vuv—59, 1494L
para-terphenyl detector in extreme uv—59, 1546A

Diffraction
diffraction anomalies with laser illumination—59, 493A
image processing for information extraction—59, 497A
reflectance-calibrated multispectral scanner—59, 514A
effects due to total reflection—59, 942
Optical Physics, Lipson, Lipson—59, 1504R

devices
diffracted light in microscope—59, 224L/474A
holography of liquid droplets—59, 473A/1334
amplitude diffraction-grating imaging—59, 568
microwave gratings, theory and experiment—59, 812
new type of blazed gratings—59, 1348
from antenna for maximum power transfer—59, 1415
patterns of Fresnel zone plate—59, 1632

measurement
linearity between density and exposure—59, 444
Born and Rytov methods—59, 1003L

resolution
resolving power and physical realizability—59, 497A
approaching perfect imagery—59, 497A

theory
small apertures, black screens—59, 79
monochromatic case, mathematical theory—59, 136
generalization of the angular spectrum—59, 146
Fresnel single-slit patterns—59, 293
Generalized Functions···, Shilov—59, 365R
by annular aperture—59, 395
maximum MTF, rotationally symmetric optics—59, 402
lenses, wave optics, and eikonal functions—59, 488A/1325
paraxial rays and diffraction theory—59, 493A
microwave holography with slab-guided waves—59, 498A
approximate solutions, single-strip diffraction—59, 501A
cascaded apertures—59, 559
homogeneous plane-wave expansions—59, 697
scaler theory calculations—59, 711
duality of algebraic theory of diffraction—59, 804
Systems and Transforms in Optics, Papoulis—59, 882R
diffraction-limited image, annular aperture—59, 936
contour integral in Fresnel-zones calculation—59, 1158
two families of apodization problems—59, 1163
properties of defocused optical system—59, 1314
low-frequency, moving conducting strips—59, 1357
by nonuiform dielectric gratings—59, 1409/1530A
near field, truncated-gaussian aperture—59, 1427
by nonplanar slit and circular apertures—59, 1429
general theory of optical aberration tests—59, 1432
gaussian beams, semi-infinite plane—59, 1440
optical-waveguide mode synthesis—59, 1527A
coherent-light propagation in optical systems—59, 1527A
transmission cross section for small aperture—59, 1528A
diffraction by conducting elliptic cylinders—59, 1528A

XUM

acoustic Bragg reflection of light—59, 1539A
images of triangle by slit with defocusing—59, 1639
Fourier analysis and color discrimination—59, 1670

holograms

five-point analysis of nonlinear holograms—59, 360L
reconstruction from holographic data—59, 482A
beam ratios in holographic interferometry—59, 482A
reconstruction in blazed holograms—59, 489A
Fraunhofer x-ray hologram—59, 498A/1179
diffused illumination in holography—59, 1339

Dispersion

thermal coefficient of refractive index—59, 851

formulas

real and imaginary parts of refractive index—59, 1000L

materials

of helium in visible and near infrared—59, 199
dispersion curve for optical glass—59, 500A
refraction and dispersion of lead fluoride—59, 500A
refractive index, several glasses—59, 774
Padé summation of Cauchy dispersion equation—59, 863
refractive index of cuprous chloride—59, 1406
refractive index of beta silicon carbide—59, 1498L

theory

scattering related to oscillator strengths—59, 34
pi-pulse propagation—59, 515A
derivation, Fresnel formulae from dispersion—59, 1528A

Distortion

atmospheric distortion, heterodyne detection—59, 10
holographic observation of laser distortion—59, 505A

Echelles

echelle production with 46-cm ruling engine—59, 1547A

Einsteinium

nuclear magnetic moments of ^{249}Bk and ^{253}Es—59, 1526A

Electrodynamics

coherence of the electromagnetic field—59, 74/1008E
Lorentz transformation, perfect conductors—59, 1357

Electro-optic effect

beam scanning with electro-optic prism—59, 108L
longitudinal effect in tetragonal crystals—59, 414
electrical selection of waveguide modes—59, 516A
orthogonal photon–photon scattering—59, 516A
electronically tunable filter—59, 744
modulation near optic axis in $LiNbO_3$ crystals—59, 1399
$(CH_3)_6N_4$, light modulation, birefringence—59, 1574

Electroretinogram

human retinal and occipital potentials—59, 511A/1558
frequency analysis of electroretinogram—59, 511A
characteristics of ERG α waves—59, 511A
electrical activity of *limulus* eye—59, 512A
nerve-impulse discharge and graded response—59, 512A
signal code in human rods—59, 1534A

Ellipsometry

determination of optical constants—59, 64
mathematical models for retardation plates—59, 176
validity for discontinuous films of Ag_2S—59, 499A/675
change of optical constants of Ge—59, 857
stress-modulated wave plate—59, 950
optical constants of anisotropic crystals—59, 1225
Analysis, Ellipsometer Meas., McCrackin—59, 1250R
thickness of thin absorptive films—59, 1385L
Analysis, Thin Films, Murt, Guldner, Eds.—59, 1683R

Emission

lines from laser-generated plasmas—59, 495A/1380L

Emissivity

ir, NO fundamental at high temperature—59, 734
of 3.3-μ band of methane—59, 1218
infrared emission from free carriers in Ge—59, 1233
integral equation for cavity emissivity—59, 1288

Erbium

Zeeman spectra of ^{166}Er I—59, 1202

Errata—59, 367, 463, 468, 885, 1008, 1250, 1391, 1685

Faraday effect

pulsed-field measurement in gases—59, 195
induced ellipticity in infrared isolator—59, 505A

Fiber optics

electrical selection of waveguide modes—59, 516A
glass lasers today—59, 1510A

Fibers

scattering from cylinders at oblique incidence—59, 43
loss mechanisms in clad glass fibers—59, 500A
detection with fiber-laser preamplifier—59, 506A
Lasers···Advances 2, Levine, Ed.—59, 1505R

Films

refractive-index determination by ellipsometry—59, 64
thermochromic effects in thin films—59, 1522A
coatings for harmonic generation—59, 1531A
optical properties for reflex copying—59, 1659

dielectric

dielectric, antireflective for laser materials—59, 468E
absorptive, ellipsometer thickness calculations—59, 1385L
reflectance of Al overcoated with MgF_2 or LiF—59, 1523A

evaporated

ellipsometric thickness of Ag_2S—59, 499A/675
reduction of polarization effects—59, 508A
Analysis, Thin Films, Murt, Guldner, Eds.—59, 1683R

metallic

optical constants of Na and K in vuv—59, 1580
polar and longitudinal magneto-optic effects—59, 468E
reflectance of semitransparent platinum films—59, 499A
optical constants of Ag_2S tarnish films—59, 499A
abnormal optical properties of thin Cu films—59, 662L

photographic

Markov photographic noise—59, 342
radiative lifetimes of *B* state of I—59, 496A

Filters

diffusion model of linear flicker responses—59, 1665

spectral

Michelson interferometer as a spectral filter—59, 281
electronically tunable filters—59, 507A
interference filters for adjustment of systems—59, 508A
broadband reflectance filters for uv—59, 508A
reduction of polarization effects—59, 508A
design of glass filter combinations—59, 518A
color schlieren system—59, 518A
acousto-optic tunable filter—59, 744
blue tristimulus filter—59, 881L
multispectral imaging of Mars from a lander—59, 1519A
realization of new type of birefringent filter—59, 1522A
interference filters for color measurement—59, 1532A
automatic photoelastimeter—59, 1542A

spatial

Generalized Networks, Fox, Ed.—59, 234R
Fourier-series analysis of detection systems—59, 391
pupil coating for maximum MTF—59, 402
coherent optical defocus correction—59, 460L
partially coherent optical systems—59, 488A/1149
least mean-square-error optical filter—59, 533/1008E
realization of complex spatial filters—59, 748
Systems and Transforms in Optics, Papoulis—59, 882R
use of nonlinearities in spatial filtering—59, 1516A
criterion of efficiency of scanning systems—59, 1541A

matched

spatial filters for sampling detectors—59, 1516A
sensitivities of the matched filter—59, 1516A
strain measurement by optical correlation—59, 1517A

Fluctuations of light

modulation and photocount distributions—59, 474A
gaussian-beam fluctuation in random medium—59, 913
laser-beam propagation in atmosphere—59, 1139
aperture averaging of fluctuating light—59, 1247L

Fluorescence

ruby as a macroscopic fluorescing material—59, 49
cerium doped in YAG and other garnet crystals—59, 60
role of optics in oceanography—59, 472A
light scattering in the central Baltic—59, 476A
laser-excited resonance fluorescence—59, 496A
CaF_2: Sm^{2+} (type I) crystals—59, 588
visibility of colors in different waters—59, 624
magnetic-field dependence of flux—59, 781L
quantum yield of x-ray excited phosphor—59, 848
blue tristimulus filter—59, 881L
laser characteristics of Nd-doped LiGe glass—59, 1514A
mode-locked and bandwidth-narrowed laser—59, 1514A

Fluorine

line strengths in B I isoelectronic sequence—59, 722

Fourier transforms

generalization of the angular spectrum—59, 146
transform-plane filtering—59, 224L/474A
Generalized Functions···, Shilov—59, 365R
Fourier-series analysis of detection systems—59, 391
partially coherent optical systems—59, 488A/1149
linear vector operations in optical processing—59, 489A
spectral techniques used in solution—59, 492A/1343
MTF computation, Hankel transform—59, 501A/1322
least mean-square-error optical filter—59, 553/1008E
homogeneous plane-wave expansions—59, 697
in hyperspaces; use of, in apodization—59, 1163
effect of truncation in computing—59, 1309
properties of defocused optical system—59, 1314
Optical Physics, Lipson, Lipson—59, 1504R
contrast enhancement, photochromic glass—59, 1516A
reproduction of space-limited functions—59, 1517A
Fourier methods in vision research—59, 1523A
restoration of images degraded by motion—59, 1524A
experiments with digital-image processor—59, 1525A
lens response to extended sources—59, 1525A
Fourier analysis and color discrimination—59, 1670

Fourier spectroscopy

continuous-drive Fourier spectroscopy—59, 507A
spectral recovery in Fourier spectroscopy—59, 1521A
Brillouin line widths by spectroscopy—59, 1531A

holograms

zone plates, achromatic fringe, holograms—59, 303
holographic storage of electric signals—59, 489A

Gadolinium

new $4f^8(^7F)6s$ levels of Gd II—59, 488A
energy levels in 5 hexagonal crystals—59, 592
energy levels in LaF_3—59, 602
Zeeman effect in Gd II—59, 1391E

Gallium

lattice spectra of rare-earth garnets—59, 1240

Geometrical optics

refraction of wavefronts—59, 114L
Optics···for Ophthalmologists, 2nd ed, Ogle—59, 116R
zero third-order spherical aberration—59, 288
Experiments in Optical Physics, Hilton—59, 362R
Recording of High Speed Processes, Dubovick—59, 466R
lenses, wave optics, and eikonal functions—59, 488A/1325
scattering by dielectric turbulence—59, 491A
saturation length for scintillation—59, 491A
paraxial rays and diffraction theory—59, 493A
point-spread function and MTF—59, 501A/1322
asymmetric Czerny–Turner spectrograph—59, 513A/955
optimizing Czerny–Turner spectrographs—59, 513A/1189
two-mirror anastigmats—59, 572
corrections for incidence at critical angle—59, 942
lens equation for telescopes—59, 1386L
computation of aberrations of high order—59, 1422
Geometric Optics, Nussbaum—59, 1503R
Geometrical Optics, Fry—59, 1505R
internal conical refraction—59, 1567
formal quantum theory of light rays—59, 1629

Germanium

change of optical constants—59, 857
infrared emission from free carriers—59, 1233
laser characteristics of Nd-doped LiGe glass—59, 1514A

Glass

new glass chart, chromatic correction—59, 478A
loss mechanisms in clad glass fibers—59, 500A
dispersion curve for optical glass—59, 500A
refractive index vs temperature—59, 774
thermal coefficient of refractive index—59, 851
Lasers···Advances 2, Levine, Ed.—59, 1505R
glass lasers today—59, 1510A
properties of Nd-doped laser glasses—59, 1514A

XUM

contrast enhancement, photochromic glass—59, 1516A
graded-index glass rods used as image relays—59, 1520A
realization of new type of birefringent filter—59, 1522A

Gold

analysis of the spectrum of gold—59, 487A

Gratings

diffraction anomalies with laser illumination—59, 493A
centimeter-wave scattering by gratings—59, 493A
color image retrieval from transparencies—59, 501A
relief images with arbitrary profile—59, 502A/1492L
satellite infrared grating spectrometer—59, 513A
optimizing Czerny–Turner spectrographs—59, 513A/1189
extreme-ultraviolet spectroheliometer—59, 514A
measurement of picosecond-pulse structure—59, 515A
amplitude diffraction-grating imaging—59, 568
holographic multiple-beam interferometry—59, 777L
radiance for rectangular profile, anomalies—59, 812
damage to gratings by electron bombardment—59, 514A
passive and dynamic absorption at 1.06 μ—59, 1294
new type of blazed grating—59, 1348
visual flicker thresholds—59, 1361
diffraction by dielectric gratings—59, 1409/1530A
role of coherence in a grating spectrometer—59, 1523A
2000-channel direct-reading spectrograph—59, 1546A
echelle production with 46-cm ruling engine—59, 1547A

Helium

dispersion in visible and near infrared—59, 199
Hα $3\,^2D \rightarrow 2\,^2P$ from H^+ impact on gases—59, 659L
production of intense continuum below 230 Å—59, 960
Annual Rev···Astronomy 6, Goldberg, Ed.—59, 1250R
He II lines from a cooled hollow cathode—59, 1526A

Holography

pulsed-laser holography—59, 473A
magnetic phase holograms on MnBi—59, 428A
Technical Group report—59, 787, 1011
Holography···Review, Kallard, Ed.—59, 1006R
diffraction by dielectric gratings—59, 1409/1530A

applications

depth inversion shearing interferometry—59, 142/499A
use in microscopy with spatial filtering—59, 224L/474A
used to measure power spectrum of object—59, 359L
holography of liquid droplets—59, 473A/1334
holographic analysis of sonar transducers—59, 474A
holographic determination of phase—59, 474A
holography of crystal growth from melt—59, 474A
imaging, inhomogeneous medium—59, 474A/1245L
data economy in holography—59, 482A
holographic storage of electric signals—59, 489A
holographic flying-spot scanner—59, 490A
hologram array for optical memory—59, 490A
holographic compensation of motion blur—59, 497A/1175
holographic system combined with an aperture—59, 498A
microwave holography with slab-guided waves—59, 498A
multiple-wavelength holographic contouring—59, 498A
holographic subtraction—59, 498A
Fraunhofer x-ray hologram—59, 498A/1179
holographic observation of laser distortion—59, 505A
holographic multiple-beam interferometry—59, 777L/1171
interferometric spectroscopy—59, 1248L
interpretation of phase objects—59, 1496L
computer-generated holograms for testing—59, 1511A
information processing with time holography—59, 1517A
strain measurement by optical correlation—59, 1517A
role of holography in image processing—59, 1523A
subfringe interferometric holography—59, 1534A
CW interferometric acoustical holograms—59, 1534A
pulsed optical holography, acoustic wavefronts—59, 1535A
control of holographic fringes—59, 1535A
novel means of thermal imaging—59, 1535A
hologram interferometer as vector bridge—59, 1535A
practical holography—59, 1539A
vibratory patterns observed in real time—59, 1540A
pulsed-laser holography applications—59, 1540A
shock measurement by holography—59, 1540A
holographic interferometry, single exposures—59, 1540A
holographic determination of strain—59, 1540A
holography-observed torsion in shaft—59, 1540A
holographic multiple-pass interferometer—59, 1541A
holograms of data masks—59, 1544A
hologram generation of 1000 images—59, 1544A
cineholomicroscopy, animal micro-circulation—59, 1545A
holography with evanescent waves—59, 1544A/1645

computer-synthesized

synthesis of holograms using hybrid computer—59, 498A
Monte-Carlo sampling for holography—59, 1545A

image characteristics

by scanning source and receiver—59, 1
atmospheric degradation of holographic images—59, 308
single sideband for twin-image elimination—59, 358L
reconstruction in blazed holograms—59, 489A
x-ray hologram with microprobe—59, 778L
effects of diffused illumination—59, 1339
holography with variations of optical path—59, 1545A
speckle removal and optical slicing—59, 1545A
holography with extended incoherent sources—59, 1545A
incorrectly repositioned hologram—59, 1546A

interference

zone plate, Fourier transform, interferometry—59, 303
analysis of nonlinear effects in holography—59, 489A
holographic system combined with an aperture—59, 498A
synthesis of holograms using hybrid computer—59, 498A

photographic problems

effects of film MTF and size in holography—59, 481A
low-noise, improved-efficiency holograms—59, 481A
signal and noise in bleached holograms—59, 481A
effects of photographic gamma—59, 482A/1650
noise spectra of photosensitive materials—59, 482A
analysis of nonlinear effects in holography—59, 489A
optimal linearization in holography—59, 490A
efficient phase holograms—59, 502A/1492L
evaluation of image-storage media—59, 1529A
hologram formation in dichromated gelatin—59, 1529A
write-read-erase thermoplastic memory—59, 1529A
holographic recordings with photopolymers—59, 1529A
high-efficiency volume holography—59, 1529A
available-light holography—59, 1530A
holographic recording noise—59, 1530A
bleached holograms—59, 1530A
thickness variations in holographic emulsions—59, 1530A
flare light in bleached holograms—59, 1544A

theory

generalization of the angular spectrum—59, 146
Generalized Networks, Fox, Ed.—59, 234R
five-point analysis of nonlinear holograms—59, 360L
beam ratios in holographic interferometry—59, 482A
reconstruction from holographic data—59, 482A

Holography (Continued)

Fraunhofer x-ray hologram—59, 498A/1179
role of holography in image processing—59, 1523A
hologram generation of 1000 images—59, 1544A
cineholomicroscopy, animal micro-circulation—59, 1545A
aperture and source size in holography—59, 1545A

restoration
enhancement, prolate spheroidal functions—59, 228L
removal of atmospheric image degradation—59, 484A
image processing for information extraction—59, 497A
holographic compensation of motion blur—59, 497A/1175
restoration by linear mean-square estimation—59, 547
last mean-square-error optical filter—59, 553/1008E
restoration of images degraded by motion—59, 1524A
noncoherent analog image processing—59, 1524A
restoration of turbulence-degarded images—59, 1524A

theory
maximum MTF for axially symmetric optics—59, 402
MTF maximum at low spatial frequencies—59, 478A
lenses, wave optics, and eikonal functions—59, 488A/1325
approaching perfect imagery—59, 497A
homogeneous plane-wave expansions—59, 697
defocused, coherently illuminated edge—59, 711
degrees of freedom of an image—59, 799
duality of algebraic theory of diffraction—59, 804
Systems and Transforms in Optics, Papoulis—59, 882R
image of general periodic bar pattern—59, 936
two families of apodization problems—59, 1163

Information theory
resolution, optical-channel capacity—59, 157
communication concepts in microscopy—59, 224L/474A
Markov photographic noise—59, 342
modulation and photocount distributions—59, 474A
structural-information flow—59, 492A
resolving power and physical realizability—59, 497A
amount of information through finite pupil—59, 799
information content of photon beams—59, 921
information content and channel of film—59, 1517A

Infrared
generalized laws of refraction, reflection—59, 187/1008E
Atmospheric Optics technical group—59, 469
Annual Rev···Astronomy 6, Goldberg, Ed.—59, 1250R

applications
Infrared Astronomy, Brancazio, Cameron, Eds.—59, 364R
infrared optics and oceanography—59, 472A

atmospheric optics
10.6-μ scintillation—59, 462L
ir emission of atmosphere and aurorae—59, 483
presence of HNO_3 in upper atmosphere—59, 483A/1131
infrared cloud radiance—59, 484A
NO fundamental band intensity—59, 734
interaction with a corn leaf—59, 1376
foreign-gas broadening of HF by CO_2—59, 1598

devices
afocal 0.4–5-μ Schmidt–Cassegrain system—59, 357L
chopper-modulated infrared detecting system—59, 391
ray traces through hollow metal light pipes—59, 407
magnitudes of bright stars—59, 479A
HgCdTe detectors for ir laser receivers—59, 497A
thermal detectivity of infrared detectors—59, 480A
quartz quarter-wave plate for 3.39 μm—59, 500A/1381L

XUM

high-coherence, high-power laser at 1.0621 μ—59, 505A
detection with fiber-laser preamplifier—59, 506A
scanned-laser infrared microscope—59, 518A
Infrared System Engineering, Hudson—59, 1389R
nonlinear image upconverters—59, 1532A
novel means of thermal imaging—59, 1535A
criterion of efficiency of scanning systems—59, 1541A
germanium bolometer in far-infrared region—59, 1547A
inductively heated King-type furnace—59, 1547A

properties of materials

absorptance of CO at low temperatures—59, 28
indices of refraction of single-crystal Se—59, 72
infrared reflectance of metallic elements—59, 499A
normal-coordinate analysis of liquid water—59, 500A
infrared reflectance of water—59, 500A
emission from free carriers in Ge—59, 1233
Nd^{+3} glass, passive and dynamic absorption—59, 1294
refractive index of water—59, 1299
optical properties of transition metals—59, 1404
transmittance of rhombic sulfur—59, 1491L

spectra

water-vapor lines from 475 to 692 cm^{-1}—59, 19
···*Infrared Group Frequencies*, Bellamy—59, 117R
absorption spectra of ammonia, 20–35 μ—59, 261
absorption by collision-broadened CO_2 lines—59, 267
new $4f^6(^7F)6s$ levels of Gd II—59, 488A
reconstruction in blazed holograms—59, 489A
far-ir resonance spectroscopy with gas lasers—59, 495A
transition probabilities for Ar I lines—59, 495A/1206
7883-Å CO_2 band in spectrum of Venus—59, 496A
ir absorption spectrum of HS near 4 μ—59, 496A
line strengths, H_2O vapor—59, 779L, 1490L
Conf. Spectroscopy, Narasimham, Ed.—59, 784R
spectra, rare-earth Al, Ga, Fe garnets—59, 1240

Inhomogeneous media

wavelength dependence of beam scintillation—59, 7
distortion, optimum heterodyne detection—59, 10
optical propagation through turbulent medium—59, 111L
limiting resolution through the atmosphere—59, 115L
hole theory of light scattering by liquids—59, 181
laser-scintillation saturation in turbulence—59, 226L
laser-beam scintillation over horizontal paths—59, 231L
atmospheric degradation of holographic images—59, 308
locally homogeneous random media—59, 319
detection of objects through turbulent medium—59, 331
propagation through random media—59, 381
fluctuations of laser beam in atmosphere—59, 385
recognition through a turbulent medium—59, 474A
holographic imaging, disturbing media—59, 474A/1245L
optical properties of deep ocean waters—59, 476A
polarization from haze and clouds—59, 484A
orthotomic systems of rays—59, 485A
measurements on turbulent media—59, 492/1343
waves in radially inhomogeneous media—59, 494A
approaching perfect imagery—59, 497A
resonant modes of cavities immersed in media—59, 516A
statistics of log-irradiance variance—59, 527
mode conversion in lens-like gas—59, 904
MTF and phase structure in turbulent medium—59, 999L
validity of Born and Rytov approximations—59, 1003L
laser-beam propagation in atmosphere—59, 1139
aperture averaging of fluctuating light—59, 1247L
strong irradiance fluctuations—59, 1455/1513A
saturation of propagation in atmosphere—59, 1513A
multiwavelength laser propagation—59, 1513A
balloon atmospheric-propagation experiment—59, 1513A
phase fluctuations, by interferometry—59, 1513A
wavelength dependence in stellar scintillation—59, 1513A
optical resonator immersed in moving medium—59, 1515A
refraction in stratified anisotropic media—59, 1527A

coherence properties

coherent propagation through atmosphere—59, 491A
spectra of beam in turbulent atmosphere—59, 491A
propagation of 4th-order coherence—59, 492A/1134

Interference

multiple-beam interference between surfaces—59, 506A
interference filters for adjustment of systems—59, 508A
reduction of polarization effects—59, 508A
color schlieren system—59, 518A
stereo interference microscope—59, 518A
amplitude diffraction-grating imaging—59, 568
construction of x-ray hologram, microprobe—59, 778L
partial coherence and localization of fringes—59, 1384L
refractive index of cuprous chloride—59, 1406
Optical Physics, Lipson, Lipson—59, 1504R
multiple-beam interference—59, 1521A
role of coherence in grating spectrometer—59, 1523A
flare light in bleached holograms—59, 1544A
of frequency-shifted mode-locked laser pulses—59, 1680L

Interferometer

Fabry–Perot with Michelson pre-filter—59, 281
Laser Parameter Measurements, Heard—59, 366R
removal of atmospheric image degradation—59, 484A
instrument for recording phase variations—59, 501A
comparison of methods of OTF measurement—59, 501A
optical analog of Mills-cross interferometer—59, 501A
scanning of grating and Fabry–Perot—59, 507A
fringes in multiple-beam interferometer—59, 507A
determination of line widths—59, 507A
control of Fabry–Perot interferometers—59, 507A
precision angular measurements—59, 507A
resonant modes of cavities immersed in media—59, 516A
spectroscopy using beat technique—59, 1248L
interferometer for bi-directional displacement—59, 1522A
Fresnel zone-plate interferometer—59, 1522A
avionic applications of laser interferometer—59, 1522A
hologram interferometer as vector bridge—59, 1535A

Interferometry

depth inversion shearing interferometry—59, 142/499A
active, difference frequency method—59, 190
zone plates, Fourier transforms, holograms—59, 303
Experiments in Optical Physics, Hilton—59, 362R
pulsed-laser holography—59, 473A
holographic analysis of sonar transducers—59, 474A
technique for measuring mutual coherence—59, 475A
interferometry of temperature inversions—59, 483R
hyperfine structure in arc spectrum of Bi—59, 487A
isotope shift measurements in Ca—59, 488A
relief image of photographic films—59, 502A
multiple-beam interference between surfaces—59, 506A
wavelength interferometric measurements—59, 506A
continuous-drive Fourier spectroscopy—59, 507A
holographic multiple-beam interferometry—59, 777L/1171
Systems and Transforms in Optics, Papoulis—59, 882R
interferometrically measured Th wavelengths—59, 971
phase-object analysis, holography—59, 1496L
self-focusing laser interferometer—59, 1515A
spectral recovery in Fourier spectroscopy—59, 1521A
"zero" thermal-expansion coefficient—59, 1521A

emissivity of 3.3-μ band of methane—59, 1218

Metrology
precision angular measurements—59, 507A
Metric System, Natl. Bur. Std. (U.S.)—59, 664R
measuring small variations of optical path—59, 1542A

Microdensitometer
linearity between density and exposure—59, 444
granularity factor for multilevel grains—59, 455
instrument for recording phase variations—59, 501A

Microscopy
linearity between density and exposure—59, 444
holography of crystal growth from melt—59, 474A
automatic lens-design program—59, 477A
variable anamorphic eyepiece for microscope—59, 478A
discontinuous films of Ag_2S—59, 499A/675
stereo interference microscope—59, 518A
scanned-laser infrared microscope—59, 518A
defocused, coherently illuminated edge—59, 711
Microscope, Past and Present, Bradbury—59, 1005R
Adv. in Microscopy 2, Barer, Cosslett, Eds.—59, 1389R
differential interference microscopy—59, 1524A

by wavefront reconstruction
hologram microscopy and spatial filtering—59, 224L/474A
reconstruction, Fraunhofer x-ray hologram—59, 498/1179
cineholomicroscopy, animal micro-circulation—59, 1545A

Microwaves
Advances in Microwaves 3, Young, Ed.—59, 465R
microwave holography with slab-guided waves—59, 498A
orthogonal photon-photon scattering—59, 516A
theory of cascaded-apertures diffraction—59, 559
Conference on Spectroscopy, Narasimham, Ed.—59, 784R
rectangular profile gratings in S polarization—59, 812
Born and Rytov methods—59, 1003L
antenna illuminance for maximum power—59, 1415
measurement of apertures—59, 1429
novel means of thermal imaging—59, 1535A
Electrons in Metals, Cochran, Haering, Eds.—59, 1682R

Mirrors
variable null lens—59, 485A
proton damage to first-surface mirrors—59, 514A
aligning laser mirrors accurately—59, 516A
two-mirror anastigmats—59, 572

Mirrors (Continued)

Conic Mirrors, Brueggemann—59, 664R
multihundred-watt Nd:YAG laser—59, 1514A
controlling transition stability of CO_2 lasers—59, 1515A
optical properties of the dihedral mirror—59, 1520A
varifocal mirror transmission of 3-D scenes—59, 1524A

Modulation of beams

electro-optic effect in KDP-type crystals—59, 414
modulation and photocount distributions—59, 474A
spatial phase modulation—59, 502A/1492L
birefringence modulator—59, 950
modulation from pair of pseudothermal sources—59, 1290
electro-optic, near optic axis in $LiNbO_3$—59, 1399
$(CH_2)_6N_4$, electro-optics, birefringence—59, 1574

Modulation transfer

Matricon as an analog display device—59, 518A
optimization and image-evaluation program—59, 1520A

aberrations

aberration-balancing merit function—59, 1155/1512A
comparison of OTF calculations—59, 1512A
OTF measurements on large, wide-angle lens—59, 1512A

atmosphere

MTF and phase structure, turbulent medium—59, 999L

eye

MTF of human eye—59, 610
vision, flickering gratings—59, 1361
chromaticity discrimination—59, 1482, 1670
Fourier methods in vision research—59, 1523A
MTF of living human eye—59, 1537A

measurement

sea water—59, 373, 378
modulation variance of wave aberration—59, 477A/692
comparison of methods of OTF measurement—59, 501A
image diffusion, nonscattering gap—59, 501A/1322
evaluation of image quality for ir systems—59, 502A
lens response to extended sources—59, 1522A

systems

partially coherent optical systems—59, 488A/1149
lens design using small computers—59, 1511A
extended-range MTF-based merit function—59, 1512A
phase-space techniques in optical analysis—59, 1520A

theory

maximized for rotationally symmetric optics—59, 402
statistics of sea radiance—59, 477A
data economy in holography—59, 482A
multiple small-angle scattering in water—59, 686
MTF of annular aperture—59, 936
effect of truncation in computing—59, 1309
properties of defocused optical system—59, 1314
aperture and source size in holography—59, 1545A
images of triangle by slit with defocusing—59, 1639

Moiré patterns

amplitude diffraction-grating imaging—59, 568

Molybdenum

energy levels of Zr, Nb, and Mo—59, 969

Monochromators

tunable acousto-optic filter—59, 744

Necrology

Alva H. Bennett—59, 1009
Olindo Oreste Ceccarini—59, 669
Janet Howell Clark—59, 786
William Elmer Forsythe—59, 1508
Karl Freund—59, 1686
Lars Olai Grondahl—59, 669
Rudolf Hase—59, 1391
Maurice F. Hasler—59, 367
Horace L. Howes—59, 669
Yun Hsia—59, 669
Elizabeth Rebecca Laird—59, 1687
George Otty Langstroth—59, 1253
Charles Rozier Larkin—59, 669
Charles Ferdinand Meyer—59, 1391
Fred A Molby—59, 1687
Richard S. Perkin—59, 1252
Konstantin V. Pestrecov—59, 669
Earle E. Richardson—59, 786
Lloyd F. Ryan—59, 669
Franz Urbach—59, 1009
Kenichi Watanabe—59, 1686

Neodymium

glass laser, passive and dynamic absorption—59, 1294
YAG lasers: present and future—59, 1510A
multihundred-watt Nd:YAG laser—59, 1514A
laser characteristics of Nd-doped LiGe glass—59, 1514A
properties of Nd-doped laser glasses—59, 1514A
Nd^{+3} aprotic solvent laser system—59, 1514A
mode-locked and bandwidth-narrowed laser—59, 1514A

Neon

$3p_4$, $3p_2$ fine-structure splitting—59, 190
extended analysis of spectrum of Ne II—59, 285
polarization produced by fast-proton impact—59, 659L
multiply ionized, beam-foil excited—59, 976
transition probabilities of $np'(n+1)p$ states—59, 1281
transition probabilities and g values for Ne I—59, 1453

Nickel

analysis of complex atomic spectra—59, 486A
infrared reflectance of metallic elements—59, 499A
optical properties in ir—59, 1404

Niobium

energy levels of Zr, Nb, and Mo—59, 969

Nitrogen

refractive index of single-crystal Se in ir—59, 72
electron excitation of N_2 and N_2^+ bands—59, 252
radiative lifetimes for levels in N II–N IV—59, 717
line strengths in B I isoelectronic sequence—59, 722
Padé summation of Cauchy dispersion equation—59, 863
absorption cross sections of N_2 bands in vuv—59, 1527A
spectrometer for temperature measurements—59, 1546A

Nonlinear optics

saturation of transmission—59, 505A
orthogonal photon–photon scattering—59, 516A
interactions of radiation and matter—59, 516A
second bleach-out effect—59, 517A
Lasers···Advances 2, Levine, Ed.—59, 1505R
YAG lasers: present and future—59, 1510A
variation of refractive index of amorphous Se—59, 1522A
coatings for harmonic generation—59, 1531A
noncollinear-phase-matching effects—59, 1531A
nonlinear multiple-image storage—59, 1535A

Oceanography

modulation transfer function for sea water—59, 373, 378
optical exploration of the oceans—59, 472A
role of optics in oceanography—59, 472A
oceanic light scattering—59, 472A
infrared optics and oceanography—59, 472A
optical properties of deep ocean waters—59, 476A
daylight at depth in the oceans—59, 476A
light scattering in the central Baltic—59, 476A
oceanic parameters and transmittance—59, 476A
absorption and scattering of water—59, 476A
irradiance in locally spherical fields—59, 476A
statistics of sea radiance—59, 477A
optical characteristics of ocean water—59, 477A
visibility of colors in different waters—59, 624
loss of resolution by scattering in water—59, 686
Optics···of Underwater Photography, McNeil—59, 783R
imaging properties of light scattered by sea—59, 891

Optical data processing

partially coherent optical systems—59, 488A/1149
linear vector operations in optical processing—59, 489A
fingerprint features, coherent optical techniques—59, 489A
power spectra of coherent optical processor—59, 489A
paraxial rays and diffraction theory—59, 493A

Optical Society

Research & Education—59, 117, 466, 884, 1010, 1253, 1392
Technical Groups—59, 236, 469, 788, 1011, 1392
committees—59, 469, 1508
program, Spring meeting—59, 472
annual report of Executive Secretary for 1968—59, 788
Ives Medalist 1969, D. H. Rank—59, 795, 1255
Executive director—59, 1013
Richardson Medal, 1969, H. H. Cary—59, 1251
Treasurer's report for 1967—59, 1394
program, 1969 Annual meeting—59, 1510
Tillyer Medal for 1969, L. A. Riggs—59, 1555
Officers, 1970—59, 1551, 1688
Mees Medalist, 1968, C. H. Townes—59, 1685
Fellows—59, 1688

Optical systems

time multiplexing system—59, 108L
removal of atmospheric image degradation—59, 484A
use and limitations of liquid optical surfaces—59, 486A
collecting systems for beam-foil spectroscopy—59, 486A
the kinoform: a wave-shaping device—59, 497A
holographic system combined with an aperture—59, 498A
precision angular measurements—59, 507A
remote oculometer—59, 517A
design and operation of fine sun sensor—59, 517A
bidirectional spectrophotometry—59, 518A
retro-reflective photometry for screens—59, 518A
color schlieren system—59, 518A
Infrared System Engineering, Hudson—59, 1389R
Aeronautic, Space Optics Technical Group—59, 1393
contrast enhancement, photochromic glass—59, 1516A
Mariner Mars '69 Canopus tracker—59, 1518A
periscope optical systems—59, 1519A
criterion of efficiency of scanning systems—59, 1541A
low-profile optical system for aircraft beacon—59, 1541A
automatic theodolite for alignment—59, 1541A
mica polarizing prism—59, 1541A
measuring small variations of optical path—59, 1542A
axicon light-collecting systems—59, 1547A
Applied Optics 1, Levi—59, 1683R

design

for detection of incoherent objects—59, 164
mathematics for systems using polarization—59, 176
hologram microscope, variable image—59, 224L/474A
zero third-order spherical aberration—59, 288
for detection through turbulence—59, 331
ray traces through hollow metal light pipes—59, 407
defocus correction by coherent optical system—59, 460L
beams at tilted ellipsoidal surfaces—59, 485A
beam-combining eyepiece—59, 485A
variable null lens—59, 485A
periscope optical systems—59, 485A
holographic flying-spot scanner—59, 490A
acousto-optic light deflection—59, 490A
instrument for recording phase variations—59, 501A
scanning of grating and Fabry–Perot—59, 507A
control of Fabry–Perot interferometers—59, 507A
interference filters for adjustment of systems—59, 508A
two-mirror anastigmats—59, 572
Conic Mirrors, Brueggemann—59, 664R
piezo-optic light modulator—59, 950
illumination geometry for laser Raman work—59, 1285
lens equation for telescopes—59, 1386L
athermalization of optical systems—59, 1512A
reproduction of space-limited functions—59, 1517A
optical tolerancing: nongeneral approach—59, 1519A
phase-space technique in optical analysis—59, 1520A
optical properties of the dihedral mirror—59, 1520A
internally stabilized optics—59, 1520A
spectral region for sun sensor—59, 1541A

performance

resolution, optical-channel capacity—59, 157
partially coherent optical systems—59, 488A/1149
anamorphic optics for spectrometer—59, 513A
Matricon as an analog display device—59, 518A
incorrectly repositioned hologram—59, 1546A
2000-channel direct-reading spectrograph—59, 1546A
stroboscopic time-resolved spectrometer—59, 1546A

Optical transfer function

resolution, optical-channel capacity—59, 157
modulation ad variance of wave aberration—59, 477A/692
comparison of methods of OTF measurement—59, 501A
aberration-balancing merit function—59, 1155/1512A
effect of truncation in computing—59, 1309
properties of defocused optical system—59, 1314
lens design using small computers—59, 1511A
comparison of OTF calculations—59, 1512A
OTF measurements on large wide-angle lens—59, 1512A

Optics

education of physicists for work in industry—59, 513A
Advanced Photography, Langford—59, 1506R
Applied Optics 1, Levi—59, 1683R

Oxygen

absorption of molecular oxygen near 1215 Å—59, 536
polarization produced by fast-proton impact—59, 659L
line strengths in B 1 isoelectronic sequence—59, 722
radiative lifetimes—59, 780L
Padé summation of Cauchy dispersion equation—59, 863
refractive indices of liquids and solid gases—59, 998L

Personalia

Florin Abelès—59, 1507
Joseph H. Altman—59, 120
James M. Anderson—59, 1391

Personalia (Continued)

Charles P. Spoelhof—59, 119
G. Toraldo di Francia—59, 1252
John L. Tupper—59, 1507
Peter G. White—59, 120

Phosphorescence

polymeric matrices for organic phosphors—59, 367E
Excitons···in Molecular Crystals, Zahlan, Ed.—59, 883R

Phosphors

absolute response of sodium salicylate in uv—59, 204
$BaSO_4$:Pb and $CaWO_4$ emission—59, 848

Phosphorus

line strengths in B I isoelectronic sequence—59, 722

Photoconductivity

regeneration of sensitizing molecules—59, 112L
methods of representing spectra—59, 223L
absorption at surface opposite incidence—59, 877L

Photographic emulsions

Markov photographic noise—59, 342
linearity between density and exposure—59, 444
effects of gamma on hologram reconstruction—59, 482A/1650
power spectra of coherent optical processor—59, 489A
effect of coherence on photographs—59, 502A
relief image of photographic films—59, 502A
relief images with arbitrary profile—59, 502A/1492L
density vs transmittance fluctuations—59, 662L
optical properties for reflex copying—59, 1659

Photography

image formation, photoelectrophoresis—59, 328
High-Speed Processes, Dubovick—59, 466R
optical exploration of the oceans—59, 472A
relief image of photographic films—59, 502A
dim-light photography—59, 502A
relief images with arbitrary profile—59, 502A/1492L
Optics···of Underwater Photography, McNeil—59, 783R
Adv. in Microscopy 2, Barer, Cosslett, Eds.—59, 1389R
Advanced Photography, Langford—59, 1506R
photosensitive films for reflex copying—59, 1659
Overview, Goddard—59, 1723R

color

color sensations from rods and long-wave cones—59, 103
color image retrieval from transparencies—59, 501A

graininess

error in radiometry due to grain—59, 108L
Markov photographic noise—59, 342
granularity factor for multilevel grains—59, 455

holography

suppressed-carrier microscopy holograms—59, 224L/474A
five-point analysis of nonlinear holograms—59, 360L
effects of film MTF and size in holography—59, 481A
low-noise, improved-efficiency holograms—59, 481A
noise spectra of photosensitive materials—59, 482A
analysis of nonlinear effects in holography—59, 489A
optimal linearization in holography—59, 490A
instrument for recording phase variations—59, 501A
construction of x-ray hologram with microprobe—59, 778L
image-storage media for holography—59, 1529A
hologram formation in dichromated gelatin—59, 1529A
holographic recordings with photopolymers—59, 1529A
write-read-erase thermoplastic optical memory—59, 1529A
high-efficiency volume holography—59, 1529A
available-light holography—59, 1530A
thickness variations in holographic emulsions—59, 1530A
practical holography—59, 1539A

resolution, and MTF

technique for measuring mutual coherence—59, 475A
least mean-square-error optical filter—59, 553/1008E
target identification by photointerpreters—59, 1478
wave structure function looking up and down—59, 1489L
aspherics in modern optical design—59, 1511A
information content and channel of film—59, 1517A
growth of small photographic images—59, 1685E

sensitometric characteristics

effect of coherence on photographs—59, 502A
absolute flux calibration for spectrograph—59, 514A
absorption at surface opposite incidence, 59, 877L
use of nonlinearities in spatial filtering—59, 1516A

Photoelasticity

photoelastic constants of α quartz—59, 682
piezo-rotatory coefficients—59, 1229

Photoelectric yield

Photoemissive Materials, Sommer—59, 1389R
of heating on vuv response of tungsten—59, 1494L

Photoionization

angular distribution of photoelectrons—59, 356L
Ionization Potentials···, Franklin *et al.*—59, 1390R
two-photon photoelectric detection—59, 1446

Photometry

equivalent luminances of colors—59, 125
Dict. of Visual Science, Shapero *et al.,* Eds.—59, 235R
Technical Group report—59. 237, 1393

silicon solar cell as photometric detector—59, 480A
lenses, wave optics, and eikonal functions—59, 488A/1325
design of glass filter combinations—59, 518A
Metric System, Natl. Bur. Std. (U.S.)—59, 664R
Stiles–Crawford effect, cone orientations—59, 757
laser intensity vs scattering angles—59, 821
quantum yield of x-ray-excited phosphor—59, 848
diffuse suspensions, reflectance, transmittance—59, 1583
Applied Optics 1, Levi—59, 1683R

Plasmas

produced by giant-pulsed ruby lasers—59, 495A/1380L
lifetimes of Ar II for use as diagnostics—59, 579
Plasma Diagnostics, Lochte-Holtgreven, Ed.—59, 784R
Elektronische Vorgänge in Gasen···, Schulz—59, 1501R
···Physical Electronics, Beck, Ahmed—59, 1502R
holographic multiple-pass interferometer—59, 1541A
Plasma Spectroscopy, Marr—59, 883R

Platinum

reflectance of semitransparent platinum films—59, 499A

Polarization

ruby as a macroscopic fluorescing material—59, 49
ir indices of refraction of single-crystal Se—59, 72
dispersion of He in visible and near ir—59, 199
Experiments in Optical Physics, Hilton—59, 362R
reflection circular dichroism—59, 500A
quartz quarter-wave plate for 3.39 μm—59, 500A/1381L
reduction of polarization effects—59, 508A
$3\,^3D \rightarrow 2\,^3P$ from H^+ impact on gases—59, 659L
anomalies of rectangular profile gratings—59, 812
piezo-rotatory coefficients and crystal symmetry—59, 1229
Reflexionsspektroskopie···, Kortüm—59, 1503R
internal conical refraction—59, 1567

atmospheric

polarization from haze and clouds—59, 484A
polarization by the Earth's atmosphere—59, 1517A
improved polarimeter for atmospheric studies—59, 1517A

magnetically induced

Faraday rotations in gases using pulsed field—59, 195
induced ellipticity in infrared isolator—59, 505A

methods

noncoherent analog image processing—59, 1524A
optics and the lunar landing—59, 481A
infrared reflectance of water—59, 500A
bidirectional spectrophotomery—59, 518A
elimination of corrections—59, 715
realization of complex spatial filters—59, 748
mica polarizing prism—59, 1541A
automatic photoelastimeter—59, 1542A

scattering

scattering from cylinders at oblique incidence—59, 43
depolarization by scattering—59, 821
depolarization in Raman spectra of powders—59, 1387L

theory

operational form of the Mueller calculus—59, 176
generalized laws, refraction, reflection—59, 187/1008E
Stokes-algebra formalism—59, 297
second bleach-out effect—59, 517A
use of Mueller matrices for calculations—59, 1004L

Potassium

extinction coefficient in vacuum uv—59, 1581

Praseodymium

spectrum, energy dependence of radial integrals—59, 827

Quartz

transmittance of fused silica—59, 1542A
quarter-wave plate for 3.39 μm—59, 500A/1381L
photoelastic constants of α quartz—59, 682

Radiation

model for a clear atmosphere, no absorption—59, 14
laser-generated plasma—59, 495A/1380L
statistics—59, 661L
optical excitation, polarization corrections—59, 715
integral equation for emissivity of cavities—59, 1288
theory of Čerenkov radiation—59, 1527A

Radiometer

ir emission of atmosphere and aurorae—59, 483A

Radiometry

error caused by photographic grain—59, 108L
intensity calibration using molecular bands—59, 110L
terminology in optics—59, 122, 242
Technical Group report—59, 237, 1393
Resource letter—59, 243
cavity-type blackbodies—59, 249
absorption and scattering of water—59, 476A
irradiance in locally spherical fields—59, 476A
statistics of sea radiance—59, 477A
magnitudes of bright stars—59, 479A
telescope baffle design—59, 486A
absolute calibration of laser system—59, 517A
polarization corrections—59, 715
quantum yield of x-ray-excited phosphor—59, 848
radiometric calibration of airglow photometer—59, 1518A
spectral radiance of stable-arc source—59, 1536A
how accurately can blackbodies be calibrated?—59, 1536A
tungsten strip-lamp calibrations—59, 1536A
diffuse suspensions, reflectance transmittance—59, 1583
Applied Optics 1, Levi—59, 1683R

Raman effect

cross sections from oscillator strength—59, 34
normal-coordinate analysis of liquid water—59, 500A
Conference on Spectroscopy, Narasimham, Ed.—59, 784R
illumination geometry for laser Raman work—59, 1285
depolarization ratios—59, 1387L
coherence in spontaneous Raman scattering—59, 1498L
pure rotational Raman scattering in CO_2—59, 1531A

Ray tracing

cavity-type blackbodies—59, 249
zero third-order spherical aberration—59, 288
afocal 0.4–5 μ Schmidt–Cassegrain system—59, 357L
through hollow metal light pipes—59, 407

laser-generated plasma—59, 495A/1380L
Beam-Foil Spectroscopy, Bashkin, Ed.—59, 1005R

Spread function

resolution, optical-channel capacity—59, 157
diminishing of, prolate spheroidal functions—59, 228L
MTF for sea water—59, 373, 378
image diffusion across nonscattering gap—59, 501A/1322
least-square restoration for bandlimited system—59, 547
multiple small-angle scattering in water—59, 686
two families of apodization problems—59, 1163
effect of truncation on computed OTF—59, 1309
properties of defocused optical system—59, 1314
lateral inhibition, visual flicker—59, 1361
Fourier analysis and color discrimination—59, 1670
growth of small photographic images—59, 1685E

Stark effect

incadmium, mercury, zinc—59, 782L

Sulfur

atomic energy levels, Slater parameters—59, 227/885E
beam-foil excitation in S II and S III—59, 879L
infrared transmittance, 32–100 μm—59, 1491L

Sun

HNO_3 absorption in solar spectrum—59, 483A/1131
solar and lunar scintillation measurements—59, 492A
extreme ultraviolet spectroheliometer—59, 514A
design and operation of fine sun sensor—59, 517A
Annual Rev···Astronomy 6, Goldberg, Ed.—59, 1250R
solar standard—59, 1536A
spectral region for sun sensor—59, 1541A

spectral distribution

model for a clear atmosphere, no absorption—59, 14
Infrared Astronomy, Brancazio, Cameron, Eds.—59, 364R
solar spectral inrradiance—59, 483A
Conference on Spectroscopy, Narasimham, Ed.—59, 784R

Surface guided waves
along dielectric interfaces—59, 942

Telescopes
afocal 0.4–5-μ Schmidt–Cassegrain system—59, 357L
design of corrected Ritchey–Chrétien telescope—59, 477A
telescope baffle design—59, 486A
lens equation for telescopes—59, 1386L
image formation in x-ray telescopes—59, 1518A
tilted-compact telescopes—59, 1521A
spectral region for sun sensor—59, 1541A

Terbium
hyperfine structure and g_J values of ^{159}Tb—59, 875L

Thallium
interferometrically measured lines, 2747–4572 Å—59, 971
theory for $5d^9 6s6p$ in third spectrum—59, 1266

Thorium
class B standards in Th spectrum—59, 487A
analysis of Th III and Th IV—59, 487A

Thulium
Tm III: energy levels and Slater parameters—59, 1526A

Titanium
Ti I, theory of odd configurations—59, 419

Transmittance

atmospheric
model for a clear atmosphere, no absorption—59, 14
interaction of light with compact plant leaf—59, 1376

materials
ammonia, 20–35 μ—59, 261
granularity factor for multilevel grains—59, 455
density vs transmittance fluctuations—59, 662L
refractive index of water in infrared—59, 1299
rhombic sulfur in infrared—59, 1491L
micrometeoroid effects on optical properties—59, 1518A
transmittance of fused silica—59, 1542A
of photosensitive films in reflex copying—59, 1659

measurement
optical properties of deep ocean waters—59, 476A
daylight at depth in the oceans—59, 476A
absorption and scattering of water—59, 476A
optical characteristics of ocean water—59, 477A
nonhemolyzed blood, 632.8 nm—59, 898

systems
and reflectance of diffusing suspensions—59, 1584

theory
transmission cross section for small aperture—59, 1528A

Tungsten
optical properties in ir—59, 1404
effect of heating on photoelectron emission—59, 1494L
tungsten strip-lamp calibrations—59, 1536A

Ultraviolet
ultraviolet radiance of the horizon sky—59, 1518A
spectral radiance of stable-arc source—59, 1536A

absorption
absorption spectrum of nitrogen dioxide—59, 496A
bidirectional spectrophotometry—59, 518A
absorption of molecular oxygen near 1215 Å—59, 536

detection
vacuum, photoelectron emission from tungsten—59, 1494L
para-terphenyl detector in extreme uv—59, 1546A

fluorescence
phosphor efficiency under uv excitation—59, 204
magnetic-field dependence of fluorescence—59, 781L

optical properties
reflectance of semitransparent platinum films—59, 499A
optical constants of some pump oils in vuv—59, 514A
Padé summation of Cauchy dispersion equation—59, 863
reflectance, Al overcoated, MgF_2 or LiF—59, 1523A
extinction coefficient of Na and K—59, 1581

optics
broadband reflectance filters for uv—59, 508A
extreme ultraviolet spectroheliometer—59, 514A
damage to gratings by electron bombardment—59, 514A
in situ reflectometer for vacuum ultraviolet—59, 514A

spectra
intensity calibration using molecular bands—59, 110L
levels and interaction in S I and Cl II—59, 227/885E
extended analysis of spectrum of Ne II—59, 285
laser-generated-plasma source in uv—59, 495A/1380L
absolute flux calibration for spectrograph—59, 514A
spectra and lifetimes in argon—59, 579
parametric calculations of $\epsilon(\omega)$—59, 738
Conference on Spectroscopy, Narasimham, Ed.—59, 784R
interferometrically measured Th wavelengths—59, 971
measuring atomic-state populations—59, 1262
Ionization Potentials···, Franklin *et al.*—59, 1390R
absorption spectrum of Ar in vuv—59, 1525A
resonance lines of Y IV and La IV—59, 1525A
Tm III:—energy levels and Slater parameters—59, 1526A
absorption cross sections of N_2 bands in vuv—59, 1527A
new multiplets of Co IX to Co XII in vuv—59, 1678L

Vision
Generalized Networks, Fox, Ed.—59, 234R
Dist. of Visual Science, Shapero *et al.*, Eds.—59, 235R
optical exploration of the oceans—59, 472A
remote oculometer—59, 517A
Fourier methods in vision research—59, 1523A
retinal-temperature increases by light—59, 1542A

binocular
binocular, stereo acuity in peripheral areas—59, 991
stimuli for fixation, vergence, and tracking—59, 1534A
monopic and dichopic increment threshold—59, 1543A
stereoscopic perception—59, 1543A

light and color
luminance requirements for hue identification—59, 91
color sensations from rods and long-wave cones—59, 103
induced tritanopia—59, 131
scotopic thresholds automated—59, 464L
color difference and CIE 1960 UCS diagram—59, 503A

low-light-level imaging sensors—59, 539
visibility of colors underwater—59, 624
foveal and peripheral color appearances—59, 640/1250E
stabilized images, thresholds, and brightness—59, 872
saturation and the foveal achromatic interval—59, 993
chromaticity discrimination—59, 1213, 1482, 1670
color change induced by background color—59, 1370
increment and decrement thresholds—59, 1383L
effects of surround on metacontrast—59, 1461
highly saturated-color stimuli—59, 1532A
color-match classifications—59, 1533A
chromatic border contrast—59, 1533A
near-threshold luminance addivity—59, 1533A
congential tritan defects and nerve atrophy—59, 1533A
deuteranopic convergence point—59, 1533A
contrast sensitivity and bandwidth of eye—59, 1538A
quantum efficiency and the scotopic MTF—59, 1538A
spatial-frequency channels in vision—59, 1538A
visual spatio-temporal interactions— 59, 1538A
scotopic suppression of photopic function—59, 1677L

nerve structure and function

latency variation in human pupil contraction—59, 97
temporal summation in backward visual masking—59, 212
rod–cone interrelation—59, 217
effect of scaling optic-nerve impulses—59, 345, 1500L
spectral sensitivity of *rhesus* monkey—59, 503A
critical duration of red and green receptors—59, 504A
anisotropies in receptive field structure—59, 504A
psychophysical assay—59, 509A
electrical responses, human visual system—59, 511A/1557
frequency analysis of electroretinogram—59, 511A
characteristics of ERG α waves—59, 511A
electrical activity of *limulus* eye—59, 512A
nerve-impulse discharge and graded response—59, 512A
ground-squirrel vision—59, 512A
saccadic suppression, eye movements—59, 617
human retinal and occipital responses—59, 635
Stiles–Crawford effect, cone orientations—59, 757
flickering patterns, lateral inhibition—59, 1361
propagation velocity of inhibition—59, 1469
critical duration for pupillary light reflex—59, 1473
eye reciprocity, 10^{-6}–10^{-5}-sec flashes—59, 1495L
signal code in human rods—59, 1534A
retinal-mosaic limitations—59, 1537A
spatial organization of visual system—59, 1538A
response of cat retinal cells with adaptation—59, 1542A
flicker, diffusion model—59, 1665

optics of eye

Optics···for Ophthalmologists, 2nd ed., Ogle—59, 116R
scattering in cornea—59, 766
invention of spectacles—59, 1398
MTF of living human eye—59, 1537A

perception

border-visibility study of Hermann grid—59, 229L
On Binocular Rivalry, Levelt—59, 236R
Nature of Perceptual Adaptation, Rock—59, 365R
observation of aerospacecraft—59, 475A
light-emitting diodes as video display—59, 479A
perception of chromaticness differences—59, 503A
pressure blindness and interocular hue shifts—59, 503A
prediction of perceived color—59, 503A
orientation-specific color aftereffects—59, 504A
linearity in visual spatial response—59, 508A
visual movement sensitivity—59, 508A
patterns of spatial summation—59, 509A
method of measuring small eye movements—59, 509A
visual sensitization by annular surrounds—59, 509A
visual effectiveness of short-duration flashes—59, 509A
visual latency as function of stimulus—59, 509A
testing Apollo helmets and visors—59, 510A
measurement of subjective image quality—59, 510A
television target-acquisition studies—59, 510A
information transfer between two eyes—59, 512A
rearrangement of retinal areas—59, 512A
binocular disparity, eye sign, and vergence—59, 512A
determinants of stabilized target visibility—59, 604
visibility of sine-wave gratings—59, 610
perceived color, two-primary projections—59, 644
Contemporary Visual Perception, Haber, Ed.—59, 666R
Mach effect—59, 711
of luminance effect on two-pulse thresholds—59, 753
real, apparent visual movement (Graham)—59, 1002L
target identification by photointerpreters—59, 1478
measure of subjective image quality—59, 1538A
study of subjective quality factor—59, 1539A
recovery of motion sensitivity—59, 1543A
sensitivity fields for movement—59, 1543A
facilitiation of perceptual latency—59, 1543A
foundations of cyclopean perception—59, 1544A

Water

water-vapor lines from 475 to 692 cm^{-1}—59, 19
MTF for sea water—59, 373, 378
optical properties of deep ocean waters—59, 476A
daylight at depth in the oceans—59, 476A
light scattering in the central Baltic—59, 476A
oceanic parameters and transmittance—59, 476A
absorption and scattering of water—59, 476A
optical characteristics of ocean water—59, 477A
concentric telescopic meniscus under water—59, 484A
normal-coordinate analysis of liquid water—59, 500A
infrared reflectance of water—59, 500A
visibility of colors in different waters—59, 624
loss of resolution by scattering in water—59, 686
vapor, ir line strengths,—59, 779L, 1490L
refractive indices of liquids and solid gases—59, 998L
infrared refractive index—59, 1299

Waveguides

field near focus of wide-angle aplanat—59, 494A
optical-waveguide mode synthesis—59, 1527A

Wavelengths

methods of representing spectra—59, 223L
extended analysis of spectrum of Ne II—59, 285
wavelengths, energy levels, and analysis of Cl I—59, 424
class B standards in Th spectrum—59, 487A
analysis of Th III and Th IV—59, 487A
shifts in laser-generated plasmas—59, 495A/1380L
absolute wavelengths of hypefine components—59, 505A
uv emission transitions in argon—59, 579
effect on evoked occipital potentials—59, 635
refractive index vs temperature—59, 774
interferometrically measured Th wavelengths—59, 971
multiply ionized neon—59, 976
interferometric wavelengths in ^{136}Xe II—59, 1526A
energy levels and wavelengths of ^{86}Kr I—59, 1614

measurement equipment

wavelength interferometric measurements—59, 506A

X rays

Crystal Structures, 2nd ed., Vol. 4, Wyckoff—59, 364R
Fraunhofer x-ray hologram—59, 498A/1179

X rays (Continued)

absolute flux calibration for spectrograph—**59**, 514A
proton damage to first-surface mirrors—**59**, 514A
Conic Mirrors, Brueggemann—**59**, 664R
x-ray hologram with microprobe—**59**, 778L
Conference on Spectroscopy, Narasimham, Ed.—**59**, 784R
excitations for $BaSO_4$: Pb and $CaWO_4$—**59**, 848
Annual Rev···Astronomy 6, Goldberg, Ed.—**59**, 1250R
Adv. in Microscopy 2, Barer, Cosslett, Eds.—**59**, 1389R
Optical Physics, Lipson, Lipson—**59**, 1504R
image formation in x-ray telescopes—**59**, 1518A
Fresnel zone plate for focusing—**59**, 1632
Analysis, Thin Films, Murt, Guldner, Eds.—**59**, 1683R

Xenon

radiative lifetimes for Xe I and II—**59**, 842
refractive indices of liquids and solid gases—**59**, 998L
interferometric wavelengths in ^{136}Xe II—**59**, 1526A
oscillator strength of resonance lines—**59**, 1607

Ytterbium

resonance lines of Y IV and La IV—**59**, 1525A

Yttrium

YAG lasers: present and future—**59**, 1510A

Zeeman effect

Zeeman spectra of ^{166}Er I—**59**, 1202
investigations in Gd II—**59**, 1391E

Zinc

infrared reflectance of metallic elements—**59**, 499A
Stark effect—**59**, 782L
theory for $3d^9 4s4p$ in ion—**59**, 1266

Zirconium

energy levels of Zr, Nb, and Mo—**59**, 969

Zone plates

Fourier transforms, achromatic interferograms—**59**, 303
five-point analysis of nonlinear holograms—**59**, 360L
contour integral in Fresnel zones calculation—**59**, 1158
diffraction patterns of Fresnel—**59**, 1632
